Question 1

Question Type: MultipleChoice

A system administrator needs to create a task that creates new QlikView documents with data associated with the Year field only. The QlikView documents need to be created using the Document Name and the values in the Year field.

What should the administrator do to meet the requirement?

Options:

- A- Set the Reduced Document name field to %SourceDocumentName% %yyyy% and the Simple Reduce value field to Year
- B- Set the Reduced Document name field to %SourceDocumentName% %yyyy% and the Loop and Reduce with Field value field to Year
- C- Set the Reduced Document name field to %SourceDocumentName% %DocumentField,Year% and the Simple Reduce value field to Year
- D- Set the Reduced Document name field to %SourceDocumentName% %DocumentField,Year% and the Loop and Reduce with Field value field to Year

Answer:

D

Question 2

Question Type: MultipleChoice

A system administrator needs to configure IIS to allow any user to access QlikView content. What should the administrator do?

Options:

- A- Disable Anonymous Authentication on the QlikView virtual paths
- B- Change the QlikView IIS application pool identity to the local administrator
- C- Disable Anonymous Authentication and enable Windows Authentication on the QlikView virtual paths
- D- Enable Anonymous Authentication and disable Windows Authentication on the QlikView virtual paths

Answer:

C

Question 3

Question Type: MultipleChoice

In a new QlikView Server installation a system administrator checks that all the QlikView services have been installed. The Windows Services console shows five QlikView services are up and running. However, in the QMC, under Status > Services, only four services are listed.

Why are only four services shown in the QMC?

Options:

- A- The QlikView Server is not licensed
- B- The QlikView Publisher is not licensed
- C- The system administrator has performed a custom installation
- D- The fifth service will appear after its 24 hour quarantine period.

Answer:

B

Question 4

Question Type: MultipleChoice

An organization needs all employees to have access to data in a QlikView document for the country in which employees are located. The deployment only has a Reload Engine.

What should the system administrator do?

Options:

- A- Configure file permissions to support data reduction
- B- Configure a Loop and Reduce task to put the files in a specific folder
- C- Set up dynamic data reduction with Section Access in the QlikView document
- D- Add the Active Directory groups for the countries to the file permissions of the QlikView document

Answer:

C

Question 5

Question Type: MultipleChoice

An organization purchases two servers to host its production and development QlikView Server environments

The system administrator needs to plan the deployment so the QlikView Publisher Repository (QVPR) from the production server can be easily migrated to the development server in a disaster recovery scenario.

Which strategy should the administrator use when planning the deployment to ensure the QVPR can be migrated between servers with minimal changes'?

Options:

- A- Configure QlikView services on all servers to use the same Active Directory service account
- B- Configure drive letters and installation folder paths identically on all servers in the deployment
- C- Apply the same license key LEF information, and control number on all servers in the deployment
- D- Configure all servers in the QlikView deployment to be a part of the same QlikView Server cluster

Answer:

B

Question 6

Question Type: MultipleChoice

Users report that the data in several QlikView documents failed to refresh A system administrator needs to determine what is causing the reload failures.

Which log files should the administrator check?

Options:

- A- QlikView task and distribution log files
- B- QlikView session and performance log files
- C- QlikView workorder and load balancer log files
- D- QlikView distribution service and management service log files

Answer:

D

Question 7

Question Type: MultipleChoice

Refer to the exhibit.

End users report they cannot access the AccessPoint. The system administrator tries to fix the issue and realizes no QlikView services have started. When the administrator tries to manually start the services, the error message shown in the exhibit is displayed.

What is the likely cause of this error?

Options:

- A- The UserDocs folder is Read Only
- B- The QlikView server license has expired
- C- The QlikView Publisher license has expired
- D- The QlikView services account password has expired

Answer:

D
