# Question 1

---

Question Type: MultipleChoice

---

The Home-Show route uses this middleware chain:

```
server.get('Show', consentTracking.consent, cache.applyDefaultCache, function (req, res, next) {  
  // base code here  
});
```

The developer added Home.;s in another cartridge, which is before the original cartridge in the cartridge path, to extend that route but it does not have the middleware chain:

```
server.append('Show', function (req, res, next) {  
  // custom code here  
});
```

Assuming the code is correct on both functions, what is the expected result?

Options:

- A- A RunTime error is thrown, 'Error: Params do not match route'.
- B- The base code executes and then the custom code executes.
- C- The custom code executes and then the base code executes.
- D- The base code executes, but the custom code is ignored because the signature lines do not match.

Answer:

A

# Question 2

---

Question Type: MultipleChoice

---

A developer observed a specific issue in production, which they cannot reproduce in other environments. The developer wants to do a hot fix to one of the ISML pages, which uses `<tag>`, to see if that resolves while issue. Which consideration must the developer keep in mind while deploying the hot fix in production?

### Options:

---

- A- It will be required to invalidate the cache for the hot fix.
- B- If the page has multiple tags, the highest cache duration will be used in production to determine the resulting page's caching behavior.
- C- The TTL cache setting only affects static content and not the page cache, which could potentially cause the production issue.

### Answer:

---

C

## Question 3

---

Question Type: MultipleChoice

---

Given the above OCAPI definitions, which permission or permissions apply?

```
{  
  "resource_id": "/sites/*/coupons/*",  
  "methods": [  
    "put"  
  ],  
  "read_attributes": "(*)",  
  "write_attributes": "(*)"  
}
```

### Options:

---

- A- Allows external applications to create coupons
- B- Allows external applications to create, update, and delete coupons
- C- Allow external applications to create, update, and delete both coupons and coupon codes
- D- Allows external applications to update coupons

### Answer:

---

D

## Question 4

---

Question Type: MultipleChoice

---
