Question 3

Question Type: MultipleChoice

A developer needs to check for product inventory in all inventory lists using the Open Commerce API.

An example request URL is:

```
http://refarch.demandware.net/dw/data/v18_3/inventory_lists/ecom-inventory/product_inventory_records/00883408601
```

Which properly should the developer check in the OCAPI settings to confirm the appropriate resource is enabled?

Options:

- A- Client_id
- B- Ecom-inventory
- C- Inventory_list

Answer:

B

Question 4

Question Type: MultipleChoice

A developer observed a specific issue in production, which they cannot reproduce in other environments. The developer wants to do a hot fix to one of the ISML pages, which uses `<tag>`, to see if that resolves while issue. Which consideration must the developer keep in mind while deploying the hot fix in production?

Options:

- A- It will be required to invalidate the cache for the hot fix.
- B- If the page has multiple tags, the highest cache duration will be used in production to determine the resulting page's caching behavior.
- C- The TTL cache setting only affects static content and not the page cache, which could potentially cause the production issue.

Answer:

C

Question 5

Question Type: MultipleChoice

A developer cannot create a custom object in Business Manager because the attributes do not show. The developer can view the object but not the attributes.
