# Question 1

---

**Question Type:** MultipleChoice

---

Business Manager has the configuration:

\* Active log category is "root"

\* Log level of INFO

The code below executes:

```
Var log = Logger.getLogger("products","export");
```

```
Log.info ("This is important information");
```

Using this information, what is the beginning of the filename in which the log will be written?

**Options:**

---

**A)** custom-export

**B)** custom-products

**C)** products

**D)** info-export

**Answer:**

---

B

## Question 2

---

**Question Type:** MultipleChoice

---

Given the requirements:

- \* To integrate with an external web service using HTTP requests
- \* To create a service for this purpose with the Service framework using the LocalServiceRegistry class.
- \* To test the service before the external service provider makes the API available

Which solution allows the developer to satisfy the requirements?

**Options:**

---

**A)** Create a service and implement the mockfull callback and a sitepreference to enable or disable the mock response.

- B) Create a service and implement the mockFill callback and set the service mode to mock.
- C) Create a service and a Sitepreference that induce the service to respond with a mock response using a conditional.
- D) Create two services, one mock and the real one, and a Sitepreference that enable the mock or the real one

**Answer:**

---

B

## Question 3

---

**Question Type: MultipleChoice**

---

A developer is working on a new site for the U.S based on an existing Canadian site. One of the requirements is a change to the address form. The current Canadian form has an <options> list with the correct two-letter abbreviation for the provinces.

The U.S. requirements are to:

\* Have an <options> list with the correct two-letter abbreviation for the states in place of the province field.

\* Set the U.S site locale.

\* Add the options list field definition to the XML file.

How should the developer set up the files before making the required edits?

### Options:

---

**A)** Create a copy of existing address.xml file in the default folder. Rename that file to adres\_US.xml

**B)** Create a new sub-folder in the forms folder. Name it US. Copy existing address.xml file in the new folder.

**C)** Create a copy of existing address.xml file in the default folder. Rename that file to address\_en\_US.xml

**D)** Create a new sub-folder in the forms folder. Name it en\_US. Copy existing address.xml file in the new folder.

### Answer:

---

C

## Question 4

---

**Question Type: MultipleChoice**

---

Given the sandbox with:

- \* Service configured and assigned to its profile and credential
- \* A code version that uses that service

And given the requirement to limit the number of success or error calls the code can perform to a restricted number of calls per second.

Which configuration should the developer perform?

**Options:**

---

- A)** Set the service as limited and change the services profile site preferences with the required values.
- B)** Set the rate limiter in the service profile and configure its values with the ones required.
- C)** Set a new quota limit for the service profile and assign the service to it.

**Answer:**

---

B

**Question 5**

---

**Question Type: MultipleChoice**

---

Given the customer basket described below:

- \* A customer has an existing basket that consists of multiple items.
- \* One of the items is identified as a gift item by an attribute at the product line item.

The developer needs to write custom code to fetch the customer basket and then modify the basket based upon the items in the cart. If the basket contains any gift items, modify the basket and create a separate shipment for the gift item.

Four hooks are required to make the modification, beginning with `modifyGETResponse` and ending with `validatebasket`.

- \* `Dw.ocapi.shop.basket.modifyGETResponse`
- \* -- missing hook --
- \* -- missing hook --
- \* `dw.ocapi.shop.basket.validateBasket`

What are the two missing hooks in the middle?

### Options:

---

- A) dw.ocapi.shop.basket.shipment.afterDELETE
- B) dw.ocapi.shop.basket.shipment.beforePATCH
- C) dw.ocapi.shop.basket.shipment.beforeDELETE
- D) dw.ocapi.shop.basket.shipment.beforePOST

Estos indican antes de actualizar y antes de introducir

### Answer:

---

B, D

## Question 6

---

### Question Type: MultipleChoice

---

Given the following conditions:

- \* Site export file with a copy of the Storefront data for a custom site
- \* Sandbox with the custom site code, but no Storefront data
- \* Requirement for a working copy of SFRA for development reference

A developer is assigned the following Business manager tasks:

- A) Import the custom Site using Site Import/Export
- B) Import the SFRA Demo Sites using Site Import/Export
- C) Rebuild the custom Site search indexes

In what sequence should the developer perform the tasks, so that the custom Site displays the products as intended?

**Options:**

---

- A) Task A, then C, then B
- B) Task B, then C, then A
- C) Task A, then B, then C
- D) Task B, then A, then C

**Answer:**

---

D

## Question 7

---

**Question Type: MultipleChoice**

---

To ensure SFRA best practices and protect against request forgery, the developer introduced CSRF token generation in the customer address form:

```
<form ... action = "submit">  
  
<input name = "${dw.web.CSRFProtection.getTokenName()}"  
value = "${dw.web.CSRFProtection.generateToken()}">  
  
...  
  
<the rest of the Form fields>  
  
...  
  
</form>
```

To implement CSRF protection when the form is submitted, the developer needs to introduce the CSRF validation using one or both of these methods as applicable:

- \* validateRequest
- \* validateAjaxRequest

Where in the code does the developer need to add this CSRF validation check?

### Options:

---

- A) In the controller function that displays the form
- B) In the middleware chain of the controller post route
- C) In the controller function that handles the submitted form
- D) In the model function that persists the form data

### Answer:

---

B

## Question 8

---

**Question Type: MultipleChoice**

---

Business Manager has the configuration:

\* Active Log category is 'root'

\* Log level of WARN

The code below is executing:

```
var log = Logger.getLogger('products');
```

Using this information, which two logs will be written?

Choose 2 answers

### Options:

---

- A) log.warn('This is a warn message');
- B) log.error('This is an error message');
- C) log.info('This is an info message');
- D) log.debug('This is a debug message');

### Answer:

---

A, C

## Question 9

---

Question Type: MultipleChoice

---

When looking at Custom Object instances for a site, a merchant notices that the creation date is not showing up on the instances in Business Manager.

Where should the developer add this attribute to the Custom Object so it is visible for the merchant to see in Business Manager?

**Options:**

---

- A) Assign the current date/time to a new custom attribute, creationDate, via code.
- B) Add the creation date to the attributes of the Custom Object.
- C) Mark the existing creation date attribute as visible.
- D) Add the creation date to the attribute group for the Custom Object.

**Answer:**

---

B

## Question 10

---

**Question Type: MultipleChoice**

---

A merchant uploads an image using the Content Image Upload module of Business Manager.

Which three modules can the merchant or developer use to display the image on the Storefront?

Choose 3 answers

**Options:**

---

- A) ISML templates
- B) Content assets
- C) Storefront catalogs
- D) Content slots
- E) Payment types

**Answer:**

---

B, C, D
