# Question 1

---

## Question Type: MultipleChoice

---

Refer to the exhibit.

A multinational company is looking to rollout Salesforce globally. The company has a Microsoft Active Directory Federation Services (ADFS) implementation for the Americas, Europe and APAC. The company plans to have a single org and they would like to have all of its users access Salesforce using the ADFS . The company would like to limit its investments and prefer not to procure additional applications to satisfy the requirements.

What is recommended to ensure these requirements are met ?

### Options:

---

- A)** Use connected apps for each ADFS implementation and implement Salesforce site to authenticate users across the ADFS system applicable to their geo.
- B)** Implement Identity Connect to provide single sign-on to Salesforce and federated across multiple ADFS systems.
- C)** Add a central identity system that federates between the ADFS systems and integrate with Salesforce for single sign-on.
- D)** Configure Each ADFS system under single sign-on settings and allow users to choose the system to authenticate during sign on to

Salesforce-

**Answer:**

---

B

## Question 2

---

**Question Type: MultipleChoice**

---

Refer to the exhibit.

A pharmaceutical company has an on-premise application (see illustration) that it wants to integrate with Salesforce.

The IT director wants to ensure that requests must include a certificate with a trusted certificate chain to access the company's on-premise application endpoint.

What should an Identity architect do to meet this requirement?

**Options:**

---

- A) Use open SSL to generate a Self-signed Certificate and upload it to the on-premise app.
- B) Configure the company firewall to allow traffic from Salesforce IP ranges.
- C) Generate a certificate authority-signed certificate in Salesforce and uploading it to the on-premise application Truststore.
- D) Upload a third-party certificate from Salesforce into the on-premise server.

**Answer:**

---

B

## Question 3

---

**Question Type:** MultipleChoice

---

Refer to the exhibit.

Image not found or type unknown

An organization has a central cloud-based Identity and Access Management (IAM) Service for authentication and user management, which must be utilized by all applications as follows:

- 1 - Change of a user status in the central IAM Service triggers provisioning or deprovisioning in the integrated cloud applications.

2 - Security Assertion Markup Language single sign-on (SSO) is used to facilitate access for users authenticated at identity provider (Central IAM Service).

Which approach should an IAM architect implement on Salesforce Sales Cloud to meet the requirements?

**Options:**

---

- A)** A Configure Salesforce as a SAML Service Provider, and enable SCIM (System for Cross-Domain Identity Management) for provisioning and deprovisioning of users.
- B)** Configure Salesforce as a SAML service provider, and enable Just-in Time (JIT) provisioning and deprovisioning of users.
- C)** Configure central IAM Service as an authentication provider and extend registration handler to manage provisioning and deprovisioning of users.
- D)** Deploy Identity Connect component and set up automated provisioning and deprovisioning of users, as well as SAML-based SSO.

**Answer:**

---

A

## Question 4

---

**Question Type:** MultipleChoice

---

Refer to the exhibit.

Image not found or type unknown

An organization has a central cloud-based Identity and Access Management (IAM) Service for authentication and user management, which must be utilized by all applications as follows:

- 1 - Change of a user status in the central IAM Service triggers provisioning or deprovisioning in the integrated cloud applications.
- 2 - Security Assertion Markup Language single sign-on (SSO) is used to facilitate access for users authenticated at identity provider (Central IAM Service).

Which approach should an IAM architect implement on Salesforce Sales Cloud to meet the requirements?

### Options:

---

- A)** Configure Salesforce as a SAML Service Provider, and enable SCIM (System for Cross-Domain Identity Management) for provisioning and deprovisioning of users.
- B)** Configure Salesforce as a SAML service provider, and enable Just-in Time (JIT) provisioning and deprovisioning of users.
- C)** Configure central IAM Service as an authentication provider and extend registration handler to manage provisioning and deprovisioning of users.
- D)** Deploy Identity Connect component and set up automated provisioning and deprovisioning of users, as well as SAML-based SSO.

**Answer:**

---

A

## Question 5

---

**Question Type:** MultipleChoice

---

Refer to the exhibit.

Image not found or type unknown

A pharmaceutical company has an on-premise application (see illustration) that it wants to integrate with Salesforce.

The IT director wants to ensure that requests must include a certificate with a trusted certificate chain to access the company's on-premise application endpoint.

What should an Identity architect do to meet this requirement?

**Options:**

---

**A)** Use open SSL to generate a Self-signed Certificate and upload it to the on-premise app.

- B) Configure the company firewall to allow traffic from Salesforce IP ranges.
- C) Generate a certificate authority-signed certificate in Salesforce and uploading it to the on-premise application Truststore.
- D) Upload a third-party certificate from Salesforce into the on-premise server.

**Answer:**

---

B

## Question 6

---

**Question Type:** MultipleChoice

---

Refer to the exhibit.

A multinational company is looking to rollout Salesforce globally. The company has a Microsoft Active Directory Federation Services (ADFS) implementation for the Americas, Europe and APAC. The company plans to have a single org and they would like to have all of its users access Salesforce using the ADFS . The company would like to limit its investments and prefer not to procure additional applications to satisfy the requirements.

What is recommended to ensure these requirements are met ?

### **Options:**

---

- A)** Use connected apps for each ADFS implementation and implement Salesforce site to authenticate users across the ADFS system applicable to their geo.
- B)** Implement Identity Connect to provide single sign-on to Salesforce and federated across multiple ADFS systems.
- C)** Add a central identity system that federates between the ADFS systems and integrate with Salesforce for single sign-on.
- D)** Configure Each ADFS system under single sign-on settings and allow users to choose the system to authenticate during sign on to Salesforce-

### **Answer:**

---

B
