A developer needs to retrieve data from an external system that stores policy data

a. The external system supports REST APIs to access and update the policies. Due to the volume of the policy data and peak hours of hours of business, calls to the REST APIs sometimes take longer than expected to response.

The developer creates an Integration Procedure to retrieve the policy data for use in an OmniScript.

Given the external system's known performance issues, which configuration should be used to implement the call to the external system?

Choose 2 answers

### Options:

---

- A- Set the Timeout property on the HTTP Action in the Integration Procedure
- B- Configure a Remote action with timeout settings of 120000
- C- Check the Chainable checkbox on the integration procedure Action in the OmniScript
- D- Check the Chain on Step Check on the HTTP Action in the Integration Procedure

### Answer:
