Question 1

Question Type: MultipleChoice

What are task lists used for in the maintenance process? Note: There are 2 correct answers to this question.

Options:

A- To book time and material consumption on a maintenance order

B- To assign tasks to a notification

C- To assign standardized operations to a maintenance order

D- To plan inspections, maintenance, and repairs

Answer:

C, D

Explanation:

According to the SAP document ''Asset Management in SAP S/4HANA Cloud'' , task lists are used to assign standardized operations to a maintenance order, and to plan inspections, maintenance, and repairs. Booking time and material consumption on a maintenance order is done using confirmations. Assigning tasks to a notification is done using activities or items.

Question 2

Question Type: MultipleChoice

Why is de-coupling your extensions from SAP S/4HANA Cloud required? Note: There are 2 correct answers to this question.

Options:

A- To ensure extensions do not conflict with SAP software updates

B- To allow customers to take advantage of predefined user exits

C- To guarantee the stability of the system

D- To enhance existing functionality within the application itself

Answer:

A, C

Explanation:

According to the SAP S/4HANA Cloud, public edition Learning Journey1, decoupling your extensions from SAP S/4HANA Cloud is required to ensure extensions do not conflict with SAP software updates and to guarantee the stability of the system. Extensions are additional functionalities or customizations that are developed by customers or partners to enhance or adapt the standard processes and features in SAP S/4HANA Cloud. Decoupling extensions means that they are developed and deployed in a separate layer or environment from the core SAP S/4HANA Cloud system, so that they do not interfere with the regular updates and upgrades of the system.

Question 3

Question Type: MultipleChoice

In the corrective maintenance (BH1) process, what actions can be performed by a maintenance technician? Note: There are 3 correct answers to this question.

Options:

A- Confirm the unplanned job

B- Post a goods movement for the maintenance order

C- Confirm the maintenance order

D- Change the maintenance request into a malfunction report

E- Create a maintenance notification

Answer:

A, C, E

Explanation:

According to the SAP S/4HANA Cloud, public edition Learning Journey1, some actions that can be performed by a maintenance technician in the corrective maintenance (BH1) process are: confirm the unplanned job; confirm the maintenance order; create a maintenance notification. Confirming the unplanned job means that you can record the completion and results of an unplanned

maintenance activity that is not linked to a maintenance order. Confirming the maintenance order means that you can record the completion and results of a planned maintenance activity that is linked to a maintenance order. Creating a maintenance notification means that you can report an issue or problem with an asset or equipment.

Question 4

Question Type: MultipleChoice

What tasks can you perform from the Display Technical Users app?

Options:

A- Change the username and password of a print user

B- Assign and unassign users to user groups

C- Upload a certificate for a communication user

D- Lock and unlock the initial user account that is delivered with the new system

Answer:

B, D

Explanation:

According to the SAP S/4HANA Cloud, public edition Learning Journey1, some tasks that you can perform from the Display Technical Users app are: assign and unassign users to user groups; lock and unlock the initial user account that is delivered with the new system. The Display Technical Users app allows you to view and manage technical users in SAP S/4HANA Cloud. Technical users are users that are created for specific purposes such as communication, printing, or testing. User groups are groups of users that share common characteristics or authorizations. The initial user account is a user account that is created by default when a new system is provisioned.

Question 5

Question Type: MultipleChoice

Where can you find packaged integration content it there is no SAP Best Practices content...

Options:

A- SAP Fiori Apps Reference Library
B- SAP API Business Hub
C- SAP Extensibility Explorer
D- SAP BTP Cockpit

Answer:

B

Explanation:

According to the SAP S/4HANA Cloud, public edition Asset Management Learning Journey1, you can find packaged integration content if there is no SAP Best Practices content in SAP API Business Hub. SAP API Business Hub is a platform that provides access to various integration services and content for SAP S/4HANA Cloud and other SAP solutions. Packaged integration content are predefined integration scenarios that enable communication and data exchange between different systems.

Question 6

Question Type: MultipleChoice

Where can you assign a maintenance work center? Note: There are 2 correct answers to this question.

Options:

A- Object list of a maintenance order
B- Responsibilities of a functional location
C- Item data of a maintenance plan
D- Task data of a malfunction report

Answer:

B, C

Explanation:

According to the SAP S/4HANA Cloud, public edition Asset Management Learning Journey1, you can assign a maintenance work center to responsibilities of a functional location or item data of a maintenance plan. A maintenance work center is an organizational unit that represents a group of people, machines, or tools that perform maintenance tasks. Responsibilities of a functional location are data that define who is responsible for maintaining a functional location. A functional location is an object that represents a technical system or part of a technical system. Item data of a maintenance plan is a subunit of a maintenance plan that contains the technical object and the assigned task list for preventive maintenance.

Question 7

Question Type: MultipleChoice

Which of the following statements are correct for a Minor Work Notification? Note: There are 3 correct answers to this question.

Options:

A- Minor work Notification needs separate approval process.
B- Minor Work notification are accepted as soon as these are submitted.
C- Work Orders are automatically generated for minor work notifications.
D- You can record the malfunction details for such notifications.
E- A work order is not required for such notifications.

Answer:

B, D, E

Explanation:

According to the SAP S/4HANA Cloud, public edition Learning Journey1, some of the statements that are correct for a Minor Work Notification are: minor work notifications are accepted as soon as these are submitted; you can record malfunction details for such notifications; a work order is not required for such notifications. A minor work notification is a type of notification that describes an issue or problem with an asset or equipment that can be resolved quickly without requiring a work order or approval. A minor work notification is automatically accepted by the system when it is created by a user. You can also record malfunction details such as cause, effect, or damage for such notifications. A work order is a document that contains all the information and activities required for performing maintenance work on an asset or equipment. A work order is not needed for minor work notifications because they can be completed by simple actions such as replacing a part or adjusting a setting.

Question 8

Question Type: MultipleChoice

Based on the SAP Activate methodology; which activities must you perform in the Explore phase?

Options:

A- Use the Quality system to demonstrate SAP Best Practice processes
B- Conduct the Fit-to-Standard analysis to gather configuration values
C- Conduct the Digital Discovery Assessment to identify extension requirements
D- Define the organizational structure and chart of accounts.

Answer:

B, C

Explanation:

Based on the SAP Activate methodology, the activities that you must perform in the Explore phase are conducting the Fit-to-Standard analysis to gather configuration values and conducting the Digital Discovery Assessment to identify extension requirements. The other options are not part of this phase.

Question 9

Question Type: MultipleChoice

Which tool do you use to develop your own cloud applications for SAP S/4 HANA Cloud?

Options:

A- SAP HANA Studio
B- SAPUI5 SDK
C- SAP ADK
D- SAP Cloud SDK

Answer:

D

Explanation:

According to the SAP S/4HANA Cloud, public edition Learning Journey1, if you want to develop your own cloud applications for SAP S/4 HANA Cloud, you should use SAP Cloud SDK. SAP Cloud SDK is a tool that allows you to create, extend, and integrate cloud applications for SAP S/4HANA Cloud and other SAP solutions. The tool provides libraries, templates, samples, and services for developing cloud applications using various programming languages and platforms.

Question 10

Question Type: MultipleChoice

A customer needs detailed customization to the standard forms and email templates. What solution should the consultant propose?

Options:

A- Use the Adobe Lifecycle Designer tool to edit a standard template
B- Use the corresponding configuration items to modify elements of the form template
C- Create a custom UI with the Custom Fields and Logic app
D- Use the Output Management apps to customize a standard template

Answer:

C

Explanation:

According to the SAP S/4HANA Cloud, public edition Asset Management Learning Journey1, if a customer needs detailed customization to the standard forms and email templates, the consultant should propose creating a custom UI with the Custom Fields and Logic app. The Custom Fields and Logic app is a tool that allows you to create custom fields and logic for standard business objects in SAP S/4HANA Cloud. You can also use this tool to create custom forms and email templates based on your custom fields and logic.
