## Question 1

---

### Question Type: MultipleChoice

---

Which steps are required to set up a real-time data streaming process based on the "SAP HANA Smart Data Access (HANA\_SDA)" source system in SAP BW/4HANA? Note: There are 3 correct answers to this question.

#### Options:

---

- A- Create a DataStore object (advanced) and a Transformation including a DTP to connect the BW DataSource.
- B- Create an SAP HANA remote source based on an SAP HANA Smart Data Integration adapter and a BW DataSource related to it.
- C- Create a CompositeProvider on top of the DataStore object (advanced) and define a BW Query on top of it.
- D- Create a Process Chain that runs the DTP, set the Process Chain to 'Streaming mode', and schedule it.
- E- Create an ABAP Project and change the Transformation from ABAP Runtime to HANA Runtime.

#### Answer:

---

A, B, D

## Question 2

---

**Question Type: MultipleChoice**

---

Which rule types support SAP HANA Runtime for Transformations in SAP BW/4HANA? Note: There are 3 correct answers to this question.

**Options:**

---

- A- ABAP field routine
- B- Lookup from DataStore object (advanced)
- C- SQL script field routine
- D- ABAP end routine
- E- ABAP start routine

**Answer:**

---

B, C, D

## Question 3

---

**Question Type: MultipleChoice**

---

You plan to virtually consume data from an ABAP CDS View in SAP BW/4HANA and decide to use an Open ODS View. Which source type does SAP recommend?

**Options:**

---

- A- Database Table or View
- B- Virtual table using SAP HANA Smart Data Access
- C- DataSource (BW)
- D- HANA Calculation View

**Answer:**

---

C

## Question 4

---

**Question Type:** MultipleChoice

---

What is a valid data target in an SAP HANA Analysis Process without using a Data Transfer Process?

**Options:**

---

- A- DataStore object (advanced)
- B- Open Hub Destination
- C- SAP HANA Database Table
- D- CompositeProvider

**Answer:**

---

C

## Question 5

---

**Question Type: MultipleChoice**

---

From an SAP BW/4HANA perspective, what is the difference between SAP HANA Smart Data Access (SDA) and SAP HANA Smart Data Integration (SDI)? Note: There are 2 correct answers to this question

**Options:**

---

- A- SDA is integrated into the SAP HANA Indexserver while you need to set up an additional SAP HANA Data Provisioning server for SDI.

**B-** SAP BW/4HANA DataSources of source system type 'SAP HANA Smart Data Access (HANA\_SDA)' can connect to SDA sources only, but NOT to SDI sources.

**C-** SAP BW/4HANA Open ODS Views can be modelled on SDI sources, but NOT on SDA sources.

**D-** SDI provides options for data replication in real-time, while SDA does NOT provide this capability.

**Answer:**

---

B, D

## Question 6

---

**Question Type: MultipleChoice**

---

You plan to virtually consume data from an ABAP CDS View in SAP BW/4HANA and decide to use an Open ODS View. Which source type does SAP recommend?

**Options:**

---

**A-** Database Table or View

**B-** Virtual table using SAP HANA Smart Data Access

**C-** DataSource (BW)

**D-** HANA Calculation View

**Answer:**

---

C

## Question 7

---

**Question Type: MultipleChoice**

---

What is a valid data target in an SAP HANA Analysis Process without using a Data Transfer Process?

**Options:**

---

**A-** DataStore object (advanced)

**B-** Open Hub Destination

**C-** SAP HANA Database Table

**D-** CompositeProvider

**Answer:**

---

C

## Question 8

---

**Question Type:** MultipleChoice

---

From an SAP BW/4HANA perspective, what is the difference between SAP HANA Smart Data Access (SDA) and SAP HANA Smart Data Integration (SDI)? Note: There are 2 correct answers to this question

**Options:**

---

- A-** SDA is integrated into the SAP HANA Indexserver while you need to set up an additional SAP HANA Data Provisioning server for SDI.
- B-** SAP BW/4HANA DataSources of source system type 'SAP HANA Smart Data Access (HANA\_SDA)' can connect to SDA sources only, but NOT to SDI sources.
- C-** SAP BW/4HANA Open ODS Views can be modelled on SDI sources, but NOT on SDA sources.
- D-** SDI provides options for data replication in real-time, while SDA does NOT provide this capability.

**Answer:**

---

B, D

## Question 9

---

**Question Type:** MultipleChoice

---

Which rule types support SAP HANA Runtime for Transformations in SAP BW/4HANA? Note: There are 3 correct answers to this question.

### Options:

---

- A- ABAP field routine
- B- Lookup from DataStore object (advanced)
- C- SQL script field routine
- D- ABAP end routine
- E- ABAP start routine

### Answer:

---

B, C, D

## Question 10

---

### Question Type: MultipleChoice

---

Which steps are required to set up a real-time data streaming process based on the "SAP HANA Smart Data Access (HANA\_SDA)" source system in SAP BW/4HANA? Note: There are 3 correct answers to this question.

#### Options:

---

- A- Create a DataStore object (advanced) and a Transformation including a DTP to connect the BW DataSource.
- B- Create an SAP HANA remote source based on an SAP HANA Smart Data Integration adapter and a BW DataSource related to it.
- C- Create a CompositeProvider on top of the DataStore object (advanced) and define a BW Query on top of it.
- D- Create a Process Chain that runs the DTP, set the Process Chain to 'Streaming mode', and schedule it.
- E- Create an ABAP Project and change the Transformation from ABAP Runtime to HANA Runtime.

#### Answer:

---

A, B, D
