## Question 1

---

**Question Type:** MultipleChoice

---

Complete the sentence. The key purpose of Gap Analysis is to \_\_\_\_\_

### Options:

---

- A- establish quality parameters for the architecture
- B- identify potential missing or overlapping functions
- C- validate nonfunctional requirements
- D- identify commercial building blocks to be purchased
- E- determine the required service levels for the architecture

### Answer:

---

B

## Question 2

---

**Question Type:** MultipleChoice

---

Which of the following is a responsibility of an Architecture Board?

**Options:**

---

- A- Conducting assessments of the maturity level of architecture discipline within the organization
- B- Allocating resources for architecture projects
- C- Creating the Statement of Architecture Work
- D- Establishing targets for re-use of components

**Answer:**

---

A

**Explanation:**

---

The Architecture Board is a governance body that oversees and supports the implementation of architectures within an organization. One of its responsibilities is to conduct assessments of the maturity level of architecture discipline within the organization using frameworks such as CMMI or ACMM. This helps to identify areas for improvement and monitor progress towards achieving higher levels of maturity. Reference: <https://pubs.opengroup.org/architecture/togaf9-doc/arch/chap44.html>

## Question 3

---

Question Type: MultipleChoice

---

Consider the following descriptions of deliverables consumed and produced across the TOGAF ADM cycle.

1	General rules and guidelines, intended to be enduring and seldom amended, that inform and support the way in which an organization sets about fulfilling its mission
2	A set of quantitative statements that outline what an implementation project must do in order to comply with the architecture.
3	A document that is sent from the sponsoring organization to the architecture organization to trigger the start of an architecture development cycle
4	The scope and approach that will be used to complete an architecture development cycle

Which deliverables match these descriptions?

## Options:

---

- A-** 1 Architecture Requirements Specification - 2 Request for Architecture Work - 3 Statement of Architecture Work - 4 Architecture Principles
- B-** 1 Statement of Architecture Work - 2 Architecture Principles - 3 Architecture Requirements Specification - 4 Request for Architecture Work
- C-** 1 Architecture Principles - 2 Architecture Requirements Specification - 3 Request for Architecture Work - 4 Statement of Architecture Work
- D-** 1 Request for Architecture Work - 2 Statement of Architecture Work - 3 Architecture Principles - 4 Architecture Requirements Specification

## Answer:

---

D

## Explanation:

---

The Request for Architecture Work is a deliverable that is sent from the sponsor and triggers the start of an architecture development cycle. It defines the scope, budget, schedule, and deliverables for a specific architecture project. The Statement of Architecture Work is a deliverable that is produced by the architect and defines the approach and resources needed to complete an architecture project. It forms the basis of a contractual agreement between the sponsor and the architecture organization. The Architecture Principles are a deliverable that is produced by the architect and defines the general rules and guidelines for the architecture work. They reflect the business principles, business goals, and business drivers of the organization. The Architecture Requirements Specification is a deliverable that is produced by the architect and defines the requirements that govern the architecture work. It covers both functional and

non-functional requirements as well as constraints and assumptions.

## Question 4

---

**Question Type:** MultipleChoice

---

Which of the following best describes the purpose of the Architecture Roadmap?

### Options:

---

- A- It provides for effective communication of the end architecture project to the stakeholders
- B- It is sent from the sponsor and triggers the start of an architecture development cycle
- C- It forms the basis of a contractual agreement between the sponsor and the architecture organization
- D- It lists work packages on a timeline showing progress towards the Target Architecture

### Answer:

---

D

## **Explanation:**

---

The purpose of the Architecture Roadmap is to provide a high-level view of how the Baseline Architecture will transition to the Target Architecture over time. It lists work packages on a timeline showing progress towards the Target Architecture, as well as dependencies, risks, and benefits. The Architecture Roadmap forms part of the Implementation and Migration Plan and guides the execution of the architecture projects. Reference: <https://pubs.opengroup.org/architecture/togaf9-doc/arch/chap20.html>

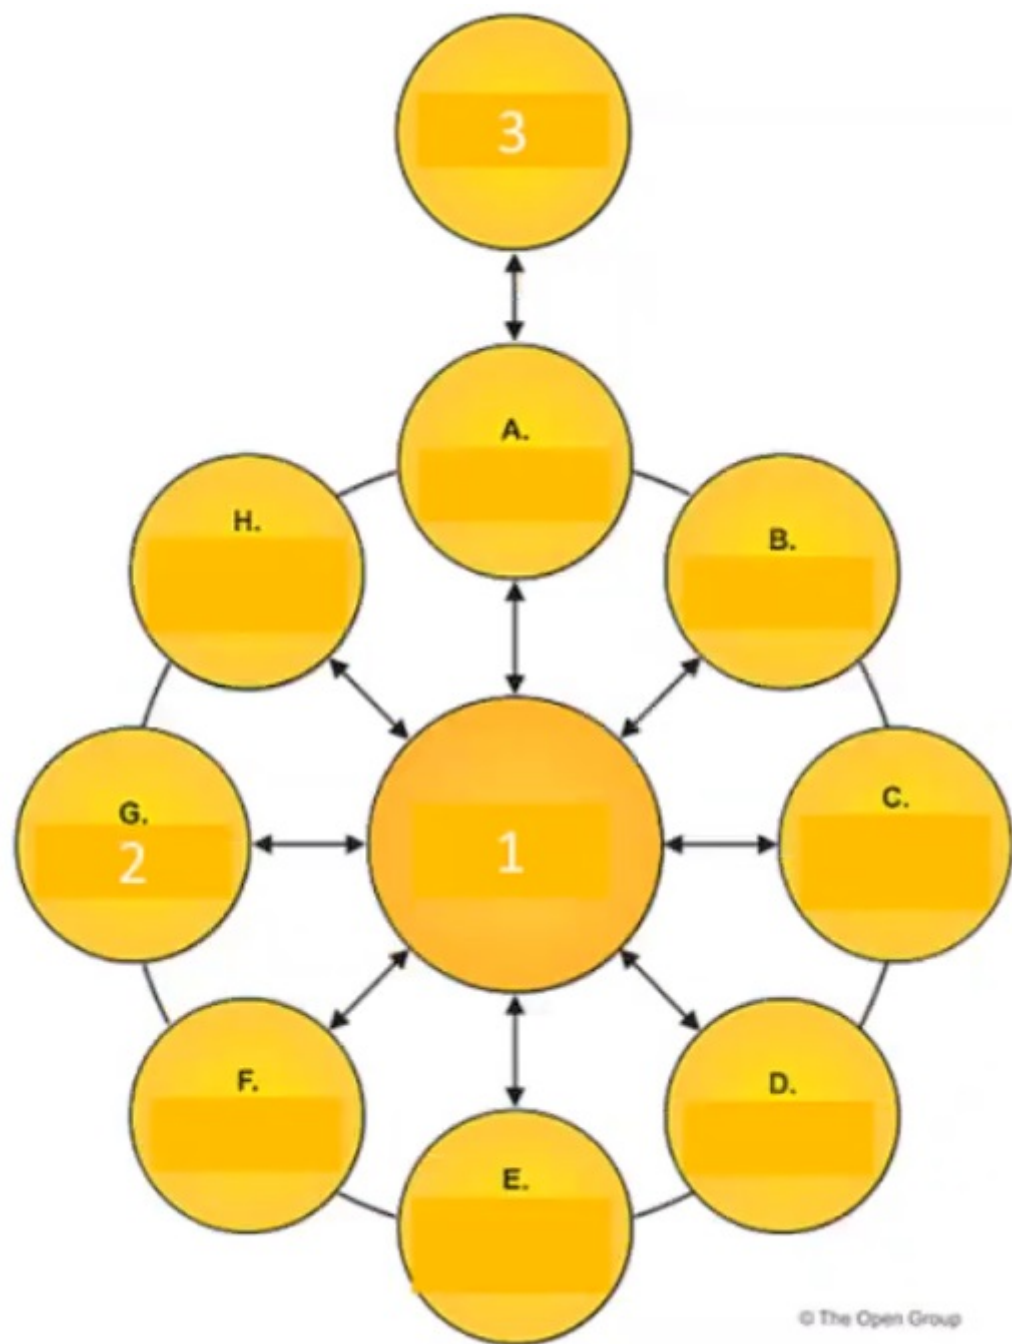

## **Question 5**

---

**Question Type: MultipleChoice**

---

Exhibit

Consider the illustration showing an architecture development cycle Which description matches the phase of the ADM labeled as item 1?

**Options:**

---

- A- Conducts implementation planning for the architecture defined in previous phases
- B- Provides architectural oversight for the implementation
- C- Operates the process of managing architecture requirements
- D- Establishes procedures for managing change to the new architecture

**Answer:**

---

A

**Explanation:**

---

The phase of the ADM labeled as item 1 is Phase F: Migration Planning. This phase conducts implementation planning for the architecture defined in previous phases by creating an Architecture Roadmap and a detailed Implementation and Migration Plan. This phase also identifies and groups major work packages, transition architectures, projects, and dependencies. Reference: <https://pubs.opengroup.org/architecture/togaf9-doc/arch/chap19.html>

## Question 6

---

**Question Type:** MultipleChoice

---

Which of the following best describes a purpose of the Gap Analysis technique?

### Options:

---

- A- To validate non-functional requirements
- B- To establish quality metrics for the architecture
- C- To determine service levels for the architecture
- D- To identify missing functions

### Answer:

---

D

### Explanation:

---

Gap analysis is a technique that is used to validate an architecture by highlighting the shortfall between the Baseline Architecture and the Target Architecture. One of the purposes of gap analysis is to identify missing functions that are either deliberately omitted, accidentally left out, or not yet defined in the Target Architecture. Missing functions are marked as gaps that need to be filled by developing or procuring the building blocks.

## Question 7

---

**Question Type:** MultipleChoice

---

What is used to structure architectural information in an orderly way so that it can be processed to meet stakeholder needs?

### Options:

---

- A- A Stakeholder Map
- B- An Architecture Framework
- C- Content Metamodel
- D- An EA Library

### Answer:

---

B

### Explanation:

---

An Architecture Framework is used to structure architectural information in an orderly way so that it can be processed to meet stakeholder needs. An Architecture Framework provides a common language and taxonomy for describing architectures; a set of tools and techniques for creating architectures; a method for defining views and viewpoints for different stakeholders; a metamodel for representing architecture artifacts; a repository for storing and managing architecture artifacts; and a governance framework for controlling architecture development and evolution.
