Question 1

Question Type: MultipleChoice

How does Server Protect for operating systems (Windows, NetWare, Linux) differ from Server Protect for file-server appliances (EMC Celerra File Servers and Network Appliance filers)?

Options:

- A- With Server Protect for file-server appliances, agents installed on the appliance do the virus scanning.
- B- With Server Protect for file-server appliances, the virus scanning is done by other servers, not the appliance.
- C- With Server Protect for file-server appliances, the virus scanning cannot be done on compressed files or archives.
- D- With Server Protect for file-server appliances, the virus scanning is done first by the appliance, then by the Information Server.

Answer:

B

Question 2

Question Type: MultipleChoice

Which two statements accurately describe the MacroTrap in Server Protect? (Choose two.)

Options:

- A- MacroTrap uses rules-based logic to search suspicious files.
- B- MacroTrap uses heuristic scanning to identify suspicious files.
- C- MacroTrap checks the invisible template within a macro-enabled application for virus-like commands in the code.
- D- MacroTrap disables all macros within suspected files before comparing code strings in the macro against the virus-pattern file.
- E- MacroTrap routes all files with embedded macros to a protected area where the file is opened and checked for suspicious commands.

Answer:

A, C

Question 3

Question Type: MultipleChoice

What are two types of Alert Notification options available in Server Protect 5.x? (Choose two.)

Options:

- A- Virus Alert
- B- Standard Alert
- C- Outbreak Alert
- D- Real-Time Alert
- E- SMNP Trap Alert

Answer:

B, C

Question 4

Question Type: MultipleChoice

Click the Exhibit button.

You have just installed Server Protect on a Windows 2000 Server that you will use as an Information Server. When you access the list of services in the Services applet for this server, you see the window displayed in the exhibit. Which two conclusions can you make about the installation? (Choose two.)

Options:

- A- The current server is virus-protected by Server Protect.
- B- The current server is not virus-protected by Server Protect.
- C- Normal Server is not running on the Windows 2000 Server.
- D- Information Server installed correctly and is running on the Windows 2000 Server.
- E- The Management Console is installed correctly and is connected to the current server.
- F- Information Server failed to install correctly and is not running on the Windows 2000 Server.

Answer:

A, D

Question 5

Question Type: MultipleChoice

You want to know the users who are transmitting the most viruses. Where can you find this information?

Options:

- A- registry
- B- Network Trap tool
- C- Virus Tracking window
- D- Statistics Results window
- E- Real-time Results window

Answer:

D

Question 6

Question Type: MultipleChoice

Which file extension is used when an infected file is renamed?

Options:

- A- *.vir
- B- *.inf
- C- *.del
- D- *._xx
- E- *.rem

Answer:

A

Question 7

Question Type: MultipleChoice

Which three tasks are located in the Do menu of the Management Console? (Choose three.)

Options:

- A- Rollback
- B- Send Feature Request
- C- Move Information Server
- D- Select Information Server
- E- Upgrade from SPNT4.x to 5.x
- F- Connect to Server with STOP Sign

Answer:

A, B, F

Question 8

Question Type: MultipleChoice

Which statement about Scheduled Scans is true?

Options:

- A- You use the task feature to configure Scheduled Scans.
- B- You use the scanning profile to configure Scheduled Scans.
- C- You use the Scan Now option to configure Scheduled Scans.
- D- You use the Schedule Scan option to configure Scheduled Scans.

Answer:

A

Question 9

Question Type: MultipleChoice

Which two statements accurately describe functions and components of Tier 2 in the Server Protect architecture? (Choose two.)

Options:

- A- It is comprised of Normal Servers.
- B- It is comprised of Information Servers.
- C- It stores all information for Normal Servers.
- D- It is comprised of the Management Console.
- E- It runs the Server Protect scanning component.
- F- It centrally manages multiple file servers and domains.

Answer:

B, C

Question 10

Question Type: MultipleChoice

You are the network administrator for a small accounting firm. Currently, there is one NT 4.0 domain called TAXES. There are three Windows NT 4.0 Normal Servers and two Novell NetWare Normal Servers in one Server Protect domain called DATA . You want to keep the NT servers in the DATA, but separate the NetWare servers into their own domain called ARCHIVE . Which two actions can you perform to achieve this result? (Select two.)

Options:

- A- delete the DATA domain
- B- create a new domain called ARCHIVE
- C- rename the TAXES domain to ARCHIVE
- D- use the Move NS(s) to another IS option to move the NetWare Normal Servers to the ARCHIVE domain
- E- use the Move NS(s) to another Domain option to move the NetWare Normal Servers to the ARCHIVE domain
- F- use the Move NS(s) to another Domain option to move the Windows Normal Servers to the ARCHIVE domain

Answer:

B, E

Question 11

Question Type: MultipleChoice

How do you force a core dump on a NetWare Normal Server?

Options:

- A- CTRL + ALT + Right-Shift
- B- Left-Shift + Left-ALT + ESC then press .c
- C- at the server prompt, type load coredump.nlm
- D- Left-Shift + Right-Shift + ALT + ESC then press .c

Answer:

D

Question 12

Question Type: MultipleChoice

When you set the scan priority to Low, how is the processor time allocated?

Options:

- A- A weighted round-robin algorithm is applied.
- B- The server performs the scan as a secondary priority.
- C- Processor time is used to scan files in the low-risk category.
- D- Processor time is used to scan files in the high-risk category.
- E- If the scan time exceeds allocated processor time, it is suspended and must be restarted manually.

Answer:

B
