Question 1

Question Type: MultipleChoice

Which statement about the system requirements for a Management Console is true?

Options:

A- The Management Console cannot run on a Linux server.
B- The Management Console can run on Windows 95/98/Me.
C- The Management Console can run on a NetWare or a Windows 2000 server.
D- The Management Console can run only on a Windows 2000 or Windows NT server.

Answer:

B

Question 2

Question Type: MultipleChoice

Which two statements accurately describe functions and components of Tier 1 in the Server Protect architecture? (Choose two.)

Options:

A- It is comprised of Normal Servers.
B- It is comprised of Information Servers.
C- It stores all information for Normal Servers.
D- It is comprised of the Management Console.
E- It runs the Server Protect scanning component.
F- It centrally manages multiple file servers and domains.

Answer:

D, F

Question 3

Question Type: MultipleChoice

Which function is possible with the Central Quarantine tool in Server Protect?

Options:

A- generate a log of all quarantined files on all Normal Servers
B- move quarantined files from several different Normal Servers into a file on one Normal Server
C- delete quarantined files when the central quarantine repository reaches a pre-determined size
D- move quarantined files from several different Normal Servers into a single file on the Information Server

Answer:

B

Question 4

Question Type: MultipleChoice

What must you uninstall before you can uninstall the Server Protect Information Servers?

Options:

A- Server Protect backup files
B- Server Protect Normal Servers
C- all other Server Protect components
D- Server Protect Management Console

Answer:

B

Question 5

Question Type: MultipleChoice

Server Protect can notify you of modifications to which files?

Options:

A- files saved on a server
B- files infected by viruses
C- files listed in the deny write list
D- files created after the most recent virus-pattern file

Answer:

C

Question 6

Question Type: MultipleChoice

Which three categories can you protect by configuring the Deny Write List? (Choose three.)

Options:

A- servers
B- services
C- protocols
D- file types
E- directories
F- specific files
G- administrator groups

Answer:

D, E, F

Question 7

Question Type: MultipleChoice

Which three features are available in Server Protect version 5.x? (Choose three.)

Options:

A- spam filter
B- built-in firewall

C- Trojan System Cleaner
D- Central Quarantine tool
E- the ability to design customized tasks
F- Centralized Management tool that allows control of all Trend Micro products connected to the network

Answer:

C, D, E

Question 8

Question Type: MultipleChoice

Click the Exhibit button.

You are the anti-virus specialist over six Windows 2000 Normal Servers. These servers are a part of the

Server Protect domain called Trendtw. Your domain filters are configured as shown in the exhibit.

Which three actions would you need to take to only see the Trendtw domain in the Management Console?(Choose three.)

Options:

A- select Trendtw in the Filtered domains pane and click Add
B- select Trenduk in the Available domains pane and click Add
C- select Trendus in the Available domains pane and click Add
D- select Trendtw in the Filtered domains pane and click Remove
E- select Trenduk in the Available domains pane and click Remove
F- select Trendus in the Available domains pane and click Remove

Answer:

B, C, D

Question 9

Question Type: MultipleChoice

Click the Exhibit button.

An administrator successfully updates and deploys a new Pattern file and scan engine to all Normal Servers in the network. The administrator then installs five new Normal Servers in subnet B to the Information Server in subnet A using the Management Console (as shown in the exhibit).

A few hours after the last Normal Server has been successfully installed, the administrator notices that ALL Normal Servers are suffering from performance degradation and decides to roll back the scan engine on the servers. After the rollback has been completed, the administrator notices that the five newly installed servers did not roll back to the previous scan engine. What is the cause of the problem?

Options:

A- The newly installed Normal Servers cannot communicate with the Information Server.
B- The newly installed Normal Servers do not have a previous scan engine to roll back to.
C- The newly installed Normal Servers have not finished registering to the Information Server.
D- After installation, the newly installed Normal Servers must be synchronized with the Information Server.

Answer:

B

Question 10

Question Type: MultipleChoice

How does Server Protect handle compressed files that exceed 30 MB in size?

Options:

A- Server Protect scans all compressed files immediately, regardless of their size.
B- Server Protect records the file name in the scan log and scans the file later when server traffic is low.
C- Server Protect skips the file, records the file name in the scan log, and scans the file when it is decompressed using real-time scanning.
D- If one file within a compressed archive exceeds 30 MB, Server Protect extracts the archive to a temporary folder, records the name in the scan log, and scans all files in the archive.

Answer:

C

Question 11

Question Type: MultipleChoice

What is the difference between the architecture of Server Protect for Windows and the architecture of

Server Protect for Linux?

Options:

A- Server Protect for Linux uses a two-tier architecture.
B- Server Protect for Linux requires a dedicated server.
C- Server Protect for Linux uses a four-tier architecture.
D- Server Protect for Linux can have only 15 Normal Servers in one domain.

Answer:

A

Question 12

Question Type: MultipleChoice

Which statement about uninstalling the Server Protect Information Server is true?

Options:

A- Uninstallation can occur in any order.
B- Uninstallation should occur before the Server Protect Normal Servers are uninstalled.
C- You can uninstall the Server Protect Information Server component in two different ways.
D- Uninstallation was successful if the Trend Micro Server Protect Agent service no longer appears in the Services window.

Answer:

D

Question 13

Question Type: MultipleChoice

Which statement about the virus-pattern update feature is true?

Options:

A- You can configure the Normal Server to send you a notification if the update fails.
B- You can configure the number of times the Normal Server retries to download updates if an update fails.
C- You can configure the Management Console to download virus-pattern updates for all of the servers on your network.
D- You can configure the Information Server to automatically check the virus-pattern file running on each Normal Server and notify you if a file is outdated.

Answer:

B
