Question 1

Question Type: MultipleChoice

What is the purpose of Opportunity Assessment?

Options:

A- To determine automation suitability
B- To describe process steps
C- To map project responsibilities
D- To map in-scope and out-of-scope activities

P2P exams

Answer:

A

Explanation:

The purpose of Opportunity Assessment within the context of UiPath Automation Hub is to evaluate and determine the suitability of a process for automation. This involves analyzing various aspects of the process, including its complexity, frequency, and potential for error reduction, to ensure that the selected processes are viable candidates for automation and can deliver the expected benefits () ().

For more detailed information, you can explore the official UiPath Automation Hub documentation via the provided links.

P2P exams

Question 2

Question Type: MultipleChoice

What is the purpose of an AS-IS diagram?

Options:

A- Maps how the process should look after being automated
B- Maps how the process should look after standardization
C- Maps out all the processes that must be automated
D- Maps out the current state of a business process

Answer:

D

Explanation:

An AS-IS diagram is a visual representation that maps out the current state of a business process. It is used to document the existing process as it is currently performed, step by step, screen by screen, usually by a human operator. The AS-IS diagram is crucial for understanding the current workflow, identifying inefficiencies, bottlenecks, and areas for improvement. It serves as the baseline for any process automation or optimization efforts, including those undertaken with UiPath's Robotic Process Automation (RPA) tools12.

P2P exams

Question 3

Question Type: MultipleChoice

In which phase of the model training process are the Shuffle, Teach, and Low Confidence training modes used to improve the model performance?

Options:

A- Train
B- Discover
C- Explore
D- Refine

P2P exams

Answer:

A

Explanation:

Model Training in UiPath Communications Mining:

The Train phase uses various training modes, such as Shuffle, Teach, and Low Confidence, to improve the model's ability to identify labels, entities, and data patterns.

Why Option A is Correct:

Shuffle mode randomizes data to avoid biases.

Teach mode allows interactive teaching of the model to understand new patterns.

Low Confidence mode focuses on refining predictions that have low confidence scores, improving accuracy.

Why Other Options Are Incorrect:

Option B: Discovery pertains to identifying clusters and themes in unstructured data.

Option C: Exploration is not a distinct phase in the training process.

Option D: Refinement happens iteratively but is not the phase explicitly involving training modes.

By leveraging these training modes, UiPath ensures the model is continuously optimized for better performance in communication mining.

Question 4

Question Type: MultipleChoice

Which type of automation is most commonly used in Customer Service or Customer Support processes?

Options:

A- Ul automation
B- Attended automation
C- Desktop automation
D- Unattended automation

Answer:

B

Explanation:

The type of automation most commonly used in Customer Service or Customer Support processes is Attended automation. This form of automation is interactive and requires human intervention at certain points, making it ideal for customer service environments where decisions and responses need to be tailored to specific customer interactions. Reference: UiPath Documentation on Automation Types at https://docs.uipath.com/.

Question 5

Question Type: MultipleChoice

Where can you find details about business rules exceptions and how to be handled?

Options:

A- In the Detailed As-Is Process Steps
B- In the PDD, in the As-Is Process Description
C- In the PDD, in the To-Be Process Description
D- In the Traceability Matrix

Answer:

C

Explanation:

Details about business rules exceptions and how they are to be handled can typically be found in the Process Design Document (PDD), specifically in the To-Be Process Description section. This section of the PDD outlines the future state of the process after automation, including how exceptions and business rules are managed. It provides a clear guide on how the automated process should handle different scenarios, including exceptions that may arise due to business rules1.

Question 6

Question Type: MultipleChoice

Which of the below options best applies to the role of the Business Analyst?

Options:

A- Assists in solution design and confirms the solution
B- Understands the business requirements and the problem
C- Bridges the gap between the stakeholders and the delivery team

D- Translates the business problem into a technology problem

Answer:

C

Explanation:

The role of the Business Analyst best applies to bridging the gap between the stakeholders and the delivery team. This involves understanding and translating business requirements into actionable and understandable tasks for the technical team, ensuring that the automation solutions meet the business needs effectively. Reference: UiPath Documentation on the Role of Business Analysts at https://docs.uipath.com/.

Question 7

Question Type: MultipleChoice

What is the final step the business analyst must take to complete the Process Design Document?

Options:

A- Describe the As Is and the To Be
B- Get sign-off from the process owner
C- Create the test case scenarios
D- Validate the document with both the business owner and the development team

Answer:

B

Explanation:

The final step a business analyst must take to complete the Process Design Document (PDD) is to get sign-off from the process owner. This step is crucial as it signifies that the process owner has reviewed the PDD, agrees with the contents, and authorizes the project to move forward. The sign-off typically indicates approval of the documented process, the proposed automation, and any other relevant details included in the PDD. It serves as formal acceptance and is often required before the development phase can begin1.

Question 8

Question Type: MultipleChoice

What is end-to-end automation with human in the loop in UiPath?

Options:

A- A type of automation that requires a human being involved only in monitoring the process
B- A type of automation that requires a human being involved only in decision-making steps of the process
C- A type of automation that requires a human being involved in every step of the process
D- A type of automation that requires a human being involved only at the beginning and end of the process

Answer:

B

Explanation:

End-to-end automation with human in the loop refers to processes automated from start to finish, where human intervention is needed primarily for decision-making points, combining the efficiency of automation with human judgment.

Question 9

Question Type: MultipleChoice

What is the aim of the performance assessment in the post-production phase of an RPA implementation?

Options:

A- To identify and tram employees who will be responsible for maintaining and managing the automation process
B- To conduct user acceptance testing to ensure that the automation process meets the

requirements of the business
C- To update the automation process with the latest features and enhancements released by UiPath
D- Monitor the performance of the process and compare it to the baseline which was established at the beginning of the project

Answer:

D

Explanation:

The aim of the performance assessment in the post-production phase of an RPA implementation is to monitor the performance of the automated process and compare it with the baseline metrics established at the beginning of the project. This assessment helps in understanding whether the automation is delivering the expected benefits, such as improved efficiency, reduced errors, and cost savings. It also provides insights into areas that may require optimization or further improvement1.

Question 10

Question Type: MultipleChoice

What is a Test Case template?

Options:

A- Is a document that outlines only the exceptions of a particular test
B- Is a document that outlines the steps and expected results of the entire project
C- Is a document that outlines the steps and expected results of a particular test
D- Is a document that outlines only the exceptions of the entire project

Answer:

C

Explanation:

A Test Case template is a standardized document that outlines the steps to be performed for a test, along with the expected results for each step. It serves as a detailed guide for testing a particular functionality or feature within a project, ensuring that all necessary scenarios are

covered and results are accurately recorded. This document is essential for systematically validating the functionality of the automation and identifying any discrepancies from the expected behavior. Reference: UiPath Testing Framework

Question 11

Question Type: MultipleChoice

What UiPath deployment model should a customer use if they would like a full-platform experience that is self-hosted in cloud or on-premises?

Options:

A- Automation Cloud
B- Automation Suite
C- Automation Platform
D- Standalone

Answer:

B

Explanation:

For customers seeking a full-platform experience that can be self-hosted either in the cloud or on-premises, the UiPath Automation Suite is the recommended deployment model. This suite provides a comprehensive set of tools and services for enterprise automation, supporting complex and scalable RPA initiatives under the organization's control.
