Question 1

A developer has created a project to scrape structured data from Service Desk tickets. Upon review, the developer discovered that the Extract Structured Data activity was set to retrieve 50 results. The activity needs to be updated to retrieve all available results.

From the drop-down list shown in the exhibit, select the correct value that should be used to update the MaxNumberOfResults property.

Properties ▾ 📌

UiPath.Core.Activities.Click

⊟ **Common**

ContinueOnError	True ☑ ...
Display Name	Extract Structured Data 'TBODY'

Question 2

⊟ **Input**

MouseButton	"<extract><row exact='1'><w ...
⊟ Target	Target

A developer wanted to use a Type Into activity which interacts with hidden or minimized windows. However, the process was only able to run on foreground windows. Which activity property configuration would cause the automation to run only on foreground windows?

ClippingRegion	
Element	Enter a VB expression ...
Selector	"<webctrl tag='TBODY' />" ...
Timeout (milliseconds)	Enter a VB expression ...
WaitForReady	WaitForReady.COMPLETE ▾ ...

Options:

A- SendWindowMessages property was enabled in the Type Into activity.

⊟ **Misc**

B- SimulateType property was enabled in the Type Into activity.

Private ☐

C- Activate property was disabled in the Type Into activity

⊟ **Options**

D- Default property selections of the Type Into activity were used.

DelayBetweenPagesMS	The amount of time, in millisec ...
MaxNumberOfResults	▾

Answer:

B

0
100
1000
9999

Question 3

A developer wants to create a process which uses UI automation activities on hidden or minimized windows for a user in a Call Center. While the process is running on the user's machine, the user also needs the ability to use the machine to look up items in a desktop application.

Which activity must be configured to be able to interact with hidden or minimized windows?

Options:

A- Get Full Text

B- Set Text

C- Click

D- Check

Answer:

C

Question 4

In a UiPath Studio project, the property ValidateUnconnectedNodes is set to True on a flowchart. A Log Message activity on this flowchart is not connected to any other node. What is the behavior of this setting at design time?

Options:

A- A warning message is written in the Output section of Studio stating that there are unconnected activities.

B- The flowchart shows an error stating that there are unconnected activities only when validated with Workflow Analyzer.

C- The flowchart is correctly validated and no error is shown, but the workflow will throw an exception at runtime.

D- The flowchart shows an error stating that there are activities which are unconnected to the other activities in the flowchart.

Answer:

D

Question 5

A foreground process is running on the user's machine. A developer starts a new background process on the same machine while the foreground process is still running. What will happen in such situation?

Explanation:

A background process doesn't need to interact with UI elements on the screen but rather relies on background processes to pass along information. UIAutomation activities should not be used in these project types.Multiple such processes can simultaneously run on a machine, even if a foreground process is already running.

The type of process is generally dictated by the type of activities it uses (whether or not they interact with UI elements). However, you can specify the type when you create a new process from Studio. By default, all processes are marked as foreground, unless specified

otherwise.

UiPath Documentation

Exam Topic:Identify and describe how UI Automation activities and/or Excel activities can be configured to interact with background windows

Question 6

A developer uses ScreenScraping to extract unstructured data from a webpage. How can the developer transform the unstructured data into a datatable?

Options:

A- Using Output Data Table activity.

B- Using Create Table activity.

C- Using Generate Data Table activity.

D- Using Build Data Table activity.

Answer:

C

Explanation:

Generate Data Table activity generates a DataTable variable from unstructured data. This activity enables you to select column and row separators according to which the table is generated. This activity is automatically generated when using the Generate Table feature in the Screen Scraping window.

UiPath Documentation

Exam Topic:Describe how to work with complex data structures and data manipulation; for example, datatables and collections

Question 7

A developer uses Send Outlook Mail Message activity to send a notification mail to theFinance team. A developer wants to change the font color of the mail message to red. How can it be achieved?

Options:

A- Change the font color property in Send Outlook Mail Message activity.

B- Use HTML notation and set BodyIsHTML property to True.

C- Use HTML notation and set IsBodyHTML property to True.

D- Change the font color directly in Outlook.

Answer:

C

Explanation:

IsBodyHtml property specifies whether the body of the message is written in HTML format. Using HTML notation, it is possible to edit font color, text alignment, font and many other visual properties of the mail text.

UiPath Documentation

Exam Topic:Identify and describe how activities are used to automate actions in Excel, e-mail, and .pdfs
