Question 1

Question Type: MultipleChoice

In your Oracle VM environment you have two shared repositories. The first is NFS share repository name NFS1 and second is iSCSI share repository name iSCSI2. By default where will Oracle VM server mount these repositories?

Options:

- A- /var/OVS/mount/NFS1/var/OVS/mount/iSCSI2
- B- /usr/share/OVS/NFS1/usr/share/OVS/iSCSI2
- C- /OVS/Repositories/NFS/NFS1/OVS/Repositories/iSCSI/iSCSI2
- D- /OVS/Repositories/NFS1/OVS/Repositories/iSCSI2
- E- /pool/fs/mnt/NFS1/pool/fs/mnt/iSCSI2

Answer:

D

Question 2

Question Type: MultipleChoice

You are building a new VM template to distribute application software for installing into Oracle VM environment. Which virtualization mode will deliver the best performance on server system that include hardware virtualization support?

Options:

- A- Implementing on physical hardware virtualization using the P2V utilities.
- B- Hardwarevirtualization XEN HVM.
- C- Hypervisor virtualization.
- D- Hardware virtualization with Para-virtualized hardware drivers.
- E- OVM dynamic virtualization.

Answer:

D

Question 3

Question Type: MultipleChoice

Which three of the given virtualized technologies are type 1 bare metal hypervisor based?

Options:

- A- Oracle VM
- B- Oracle VM virtual box
- C- VMware player
- D- Xen
- E- Solaris Zone
- F- VMware ESXI

Answer:

A, D, F

Question 4

Question Type: MultipleChoice

When would you define the value for priority and process cap % when using Oracle VM manager?

Options:

- A- When editing a server pool policy.
- B- When adding a new server to server pool.
- C- When creating a new VM.
- D- When adding a new server storage.
- E- When define the VLAN group.

Answer:

C

Question 5

Question Type: MultipleChoice

Which statements about Oracle VM agent architecture are accurate?

Options:

- A-** Oracle VM agent are daemon processes that automatically initiated when an Oracle VM server is booted.
- B-** Oracle VM manager always uses SSH command directly to dom0 on each Oracle VM server when the agent does not respond.
- C-** Oracle VM manager is capable of communicating with multiple server pools master server.
- D-** Multiple server pools master server should be running 1 active and 1 standby in each server pool to provide redundancy and fault tolerance.
- E-** All communication from one agent to other agent with in a server pool routed through the Oracle VM manager.
- F-** You can specify using Oracle VM manager which Oracle VM server assist this server pool as master server.

Answer:

A, C, F

Question 6

Question Type: MultipleChoice

Which statement best describe Oracle support policy on supporting a virtual machine deployed from an Oracle template?

Options:

- A- It cannot be supported by Oracle under any condition.
- B- It can be supported only in development and only when no customization have been made.
- C- It can be supported only with in the first 30 days of deployment.
- D- It will be supported in any environment provide your Oracle support contract is current.
- E- It will be supported in any environment regardless of circumstances.

Answer:

D

Question 7

Question Type: MultipleChoice

Which two steps would you take to configure IPMI for a server in your Oracle VM environment?

Options:

- A- Configure the user name, password and IP address using Oracle VM agent.
- B- Configure the user name, password and IP address using the Oracle VM manager.

- C-** Edit the IPMI.conf file on the Oracle VM server to enable automatic power setting.
- D-** Enable Wake-ON-LAN in the server BIOS.
- E-** Enable automatic power saving in Oracle VM Manager.

Answer:

B, D

Question 8

Question Type: MultipleChoice

In your Oracle VM environment, you have been troubleshooting intermittent crashes of an Oracle VM server. Oracle support has determined that the crashes are caused by the network latency and the servers are timing out and rebooting after trying to access the server pool file system. Oracle has recommended that you increase the heartbeat dead threshold from the default of 31 to a value 61. Which file store this configuration parameter?

Options:

A- /etc/myOCFS2.conf.

B- /etc/myOVS/o2cb.

C- /etc/sysconfig/esxcluster.conf.

D- /etc/OCFS2/manager.config.

E- /etc/sysconfig/o2cb.

Answer:

E

Question 9

Question Type: MultipleChoice

Which network configuration step in Oracle VM manager result in the automatically creation of a network bridge?

Options:

A- A network is created or edited and the network bridge checkbox is selected

B- A network is created or edited and assign the virtual machine network used type

C- A network is edited and assign a newname

D- A network is created and edited and assign the storage network used type

E- A network is deleted

Answer:

B

Question 10

Question Type: MultipleChoice

You are installing Oracle VM manager for use in production environment. The installation software provides a choice for you to install Oracle database 11g express edition or connect to an existing oracle database. What are the two reasons that you might want to connect to an existing Oracle database?

Options:

A- An Oracle database is not supported by Oracle XE database might not be readily available.

B- Accessing an existing database over the LAN is much faster than accessing a locally installed database due to resource content.

C- Oracle XE has restrictions such as limitation on total database size and number of processor used core which don't constrains other Oracle database editions.

- D-** Oracle VM manager is not fully functional when Oracle XE is used for its repository.
- E-** Oracle XE database cannot be backed up.
- F-** A repository created in Oracle XE cannot be migrated to another edition of Oracle database due to restrictions.

Answer:

A, C, F

Question 11

Question Type: MultipleChoice

Which three statements describe the benefit and challenges of having multiple storage repositories on separate storage devices?

Options:

- A-** The second repository will become a mirror of the first.
- B-** I/O may be distributed across the repositories but actually providing the better performance.
- C-** Multiple storage repositories can reduce the overall impact of storage device malfunctioning.

- D-** You must allow Oracle to decide where to place guest and virtual disks.
- E-** There is a chance that space will be over allocated, resulting in wasted space.
- F-** Both repositories must be of same type (NFS, iSCSI or fiber channel).

Answer:

B, C, E

Question 12

Question Type: MultipleChoice

Which four attributes can be changed for an existing virtual machine using the edit virtual machine wizard in the Oracle VM manager?
Assume that the virtual machine is not running.

Options:

- A-** A file name in the storage repository of a virtual disk image accessed by the virtual machine.
- B-** The amount of memory allocated to virtual machine.
- C-** CPU priority of the virtual machine.

- D-** The processor clock speed for the virtual machine.
- E-** The process cap % limiting virtual machine processor location.
- F-** Boot device order for the virtual machine.
- G-** The NIC bonding configuration for the virtual machine.

Answer:

B, C, E, F
