Question 1

Question Type: MultipleChoice

Refer to the confusion matrix:

		Predicted Outcome	
		0	1
Actual Outcome	0	58	44
	1	23	25

Calculate the accuracy and error rate (0 - negative outcome, 1 - positive outcome)

Options:

- A-** Accuracy = $58/102$, Error Rate = $23/48$
- B-** Accuracy = $83/102$, Error Rate = $67/102$
- C-** Accuracy = $25/150$, Error Rate = $44/150$
- D-** Accuracy = $83/150$, Error Rate = $67/150$

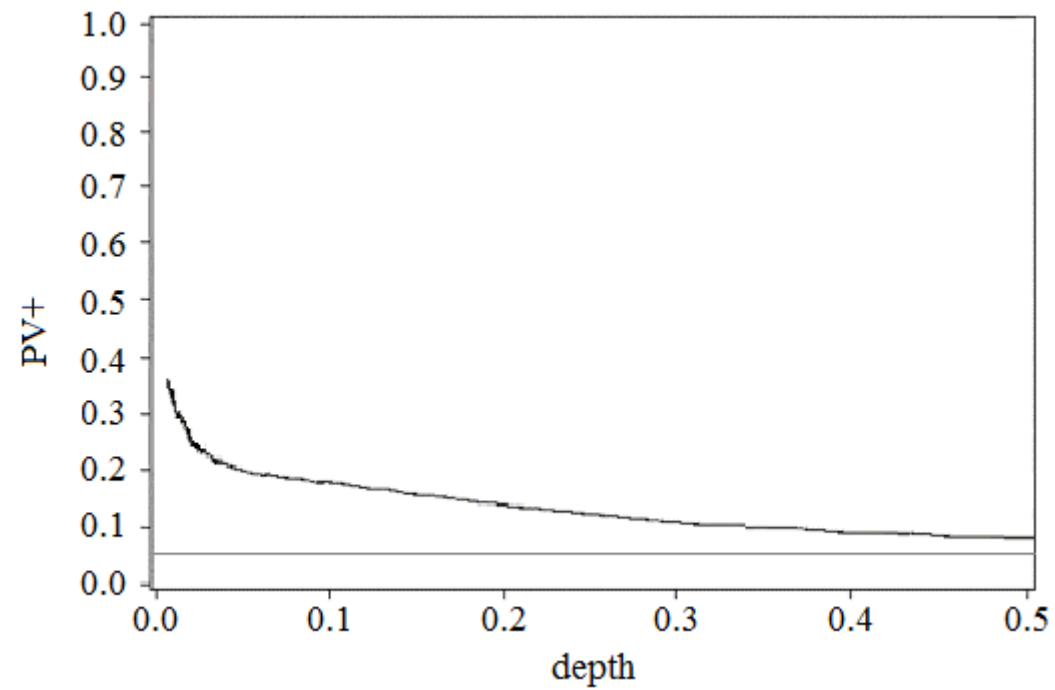

Answer:

A

Question 2

Question Type: MultipleChoice

Refer to the exhibit:

On the Gains Chart, what is the correct interpretation of the horizontal reference line?

Options:

- A- the proportion of cases that cannot be classified
- B- the probability of a false negative
- C- the probability of a false positive
- D- the prior event rate

Answer:

B

Question 3

Question Type: FillInTheBlank

Refer to the confusion matrix:

		Predicted Outcome	
		0	1
Actual Outcome	0	345	155
	1	188	312

An analyst determines that loan defaults occur at the rate of 3% in the overall population. The above confusion matrix is from an oversampled test set (1 = default).

What is the sensitivity adjusted for the population event probability?

Enter your answer in the space below. Round to three decimals (example: n.nnn).

Answer:

Question 4

Question Type: MultipleChoice

A researcher has several variables that could be possible predictors for the final model. There is interest in checking all 2-way interactions for possible entry to the model. The researcher has decided to use forward selection within PROC LOGISTIC. Fill in the missing code option that will ensure that all 2-way interactions will be considered for entry.

```
proc logistic data=finances;  
  class gender branch;  
  model default = gender branch income debt  
                gender|branch|income|debt @2  
    / selection=forward slentry=0.01 <insert option here> ;  
run;
```

Options:

- A- start = 5
- B- include = 4
- C- include = 5
- D- start = 4

Answer:

C

Question 5

Question Type: MultipleChoice

What is a benefit to performing data cleansing (imputation, transformations, etc.) on data after partitioning the data for honest assessment as opposed to performing the data cleansing prior to partitioning the data?

Options:

- A- It makes inference on the model possible.
- B- It is computationally easier and requires less time.
- C- It omits the training (and test) data sets from the benefits of the cleansing methods.
- D- It allows for the determination of the effectiveness of the cleansing method.

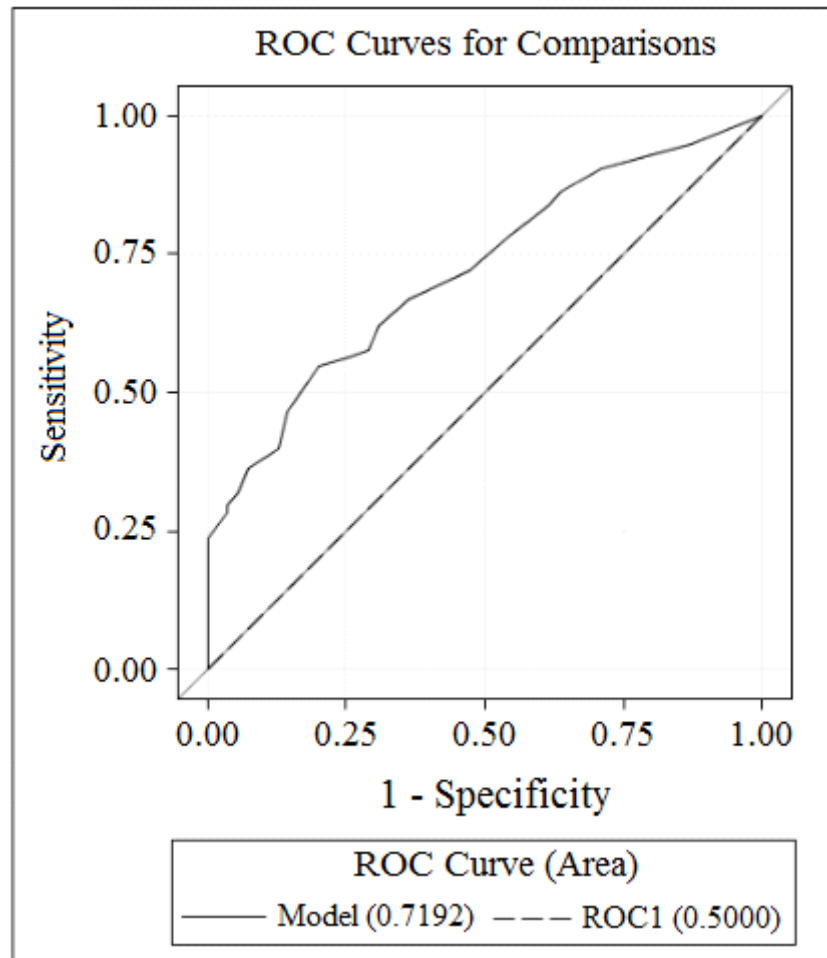

Answer:

D

Question 6

Question Type: MultipleChoice

Refer to the exhibit:

Which SAS program produced the graph?

A

```
proc reg data = SASUSER.RETAIL;  
    model Purchase = Gender Age Income / lackfit;  
run;
```

B

```
proc reg data = SASUSER.RETAIL;  
    model Purchase = Gender Age Income / vif;  
run;
```

C

```
proc reg data = SASUSER.RETAIL plots(only)=(RSTUDENTBYPREDICTED) ;  
    model Purchase = Gender Age Income;  
run;
```

D

```
proc reg data = SASUSER.RETAIL plots(only)=(COOKSD) ;  
    model Purchase = Gender Age Income;  
run;
```

Options:

A- Option A

B- Option B

C- Option C

D- Option D

Answer:

B
