Question 1

Question Type: MultipleChoice

A user you advise wishes to transfer variable process instructions for automated processing directly to certain work centers and machines in the production department (for example, feed speed, pressing pressure, dry temperature). The user also wishes to receive variable as-is messages (such as actual quantities, actual times) from these work centers and machines and to process these messages for feedback concerning production orders. Which of the following options would you recommend to implement these requirements?

Options:

- A- Execution Steps (XSteps) and process messages
- B- SAP Business Intelligence (BI)
- C- Plant data collection (PP-PDC) interface
- D- SAP Application Link Enabling (ALE)

Answer:

A

Question 2

Question Type: MultipleChoice

Which data forms the basis for calculating the capacity requirement for an operation?

(Choose three.)

Options:

- A- Standard values (routing)
- B- In-house production time (material master)
- C- Transport time (routing)
- D- Formulas (work center)
- E- Operation control key (routing)

Answer:

A, D, E

Question 3

Question Type: MultipleChoice

When maintaining a work center, formulas can be assigned in the scheduling view. Formulas use formula parameters for calculation. What can be the origin of the formula parameters used for scheduling? (Choose three.)

Options:

- A- General values from work scheduling view in the material master
- B- Standard value from operation in task list
- C- User-defined field from operation in task list
- D- General operation values in task list
- E- General item values in bill of materials

Answer:

B, C, D

Question 4

Question Type: MultipleChoice

Which options can you offer someone who uses the SAP ECC system for production orders and requires support for material supply in production? (Choose three.)

Options:

- A- Automatic generation of a transport order
- B- Material directory
- C- Pull list
- D- Pick list
- E- Logistics Information System (LIS)

Answer:

A, C, D

Question 5

Question Type: MultipleChoice

In SAP ECC, you want to map an in-house production process for general warehouse production. The fields in the area of the lot size-dependent in-house production time are to be populated when the material master for the final product is created. These fields can be

maintained by updating from the scheduling result for the associated routing. You now think that there could be significant changes to the production times in the routing and decide against updating the material master. What problem could this lead to?

Options:

- A-** Subsequent capacity planning is no longer possible due to the obsolete scheduling parameters.
- B-** Requirements planning runs up against an exception message in basic dates scheduling because the material master parameters do not match the scheduling result from the routing.
- C-** In the course of basic dates scheduling with requirements planning, dependent requirements request the components from the bill of materials at the wrong times.
- D-** Lead time scheduling, which occurs by the time that a planned order is converted into a production order (at the latest), cannot take place on the basis of incorrect basic dates.

Answer:

C

Question 6

Question Type: MultipleChoice

Which of the following statements about the SAP Solution Manager listed is correct?

Options:

- A- Solution Manager is part of the SAP ECC System.
- B- Solution Manager is an add-on industry solution.
- C- Solution Manager is a stand-alone system that communicates with other systems in a system landscape.
- D- Solution Manager is a satellite system in a system landscape.

Answer:

C

Question 7

Question Type: MultipleChoice

In your company planning strategies are used in the SAP-ECC demand management that are based on consumption. Which of the following statements about consumption is true?

(Choose two.)

Options:

- A-** A consumption situation is dynamic and is always restructured with the planning run.
- B-** Consumption can also take place between order reservations and planned independent requirements, depending on the strategy.
- C-** Consumption always takes place on the material level between the planned independent requirements and the planned orders.
- D-** The consumption parameters (consumption mode and consumption interval) can be set in the material master or in the MRP group.

Answer:

B, D

Question 8

Question Type: MultipleChoice

In which of the following objects can you activate backflushing of components if you want to use this functionality during order confirmation? (Choose three.)

Options:

- A- Work Center
- B- Production Scheduling Profile
- C- Material Master (Finished Product)
- D- Routing
- E- Material Master (Component)

Answer:

A, D, E

Question 9

Question Type: MultipleChoice

Which of the following elements do you have to prepare for costing of a production order to function without errors? (Choose three.)

Options:

- A- Assign costing variants to order type.
- B- Propose a standard text key in work center.

- C- Assign a production scheduling profile to the material master (product).
- D- Enter formulas for costing in the work center.
- E- Use an operation control key with the indicator costing-relevant.

Answer:

A, D, E
