## Question 1

---

**Question Type:** MultipleChoice

---

What must you do to synchronize a new Vault server with an organization's NTP server?

### Options:

---

- A-** Configure an AllowNonStandardFWAddresses rule for the organization's NTP server in DBParm.ini on the Vault server.
- B-** Use the Windows Firewall console to configure a rule on the Vault server which allows communication with the organization's NTP server.
- C-** Ensure the organization's NTP server is installed in the same location as the Vault server requiring synchronization.
- D-** Update the AutoSyncExternalObjects configuration in DBParm.ini on the Vault server to schedule regular synchronization.

### Answer:

---

A

## Question 2

---

**Question Type:** MultipleChoice

---

This value needs to be added to the PVWA configuration file:

Assuming all CyberArk PVWA servers were installed using default paths/folders, which configuration file should you locate and edit to accomplish this?

**Options:**

---

- A- c:\inetpub\wwwroot\passwordvault\web.config
- B- c:\inetpub\wwwroot\passwordvault\services\web.config
- C- c:\cyberark\password vault web access\env\web.config
- D- c:\program files\cyberark\password vault web access\web.config

**Answer:**

---

A

## Question 3

---

**Question Type:** MultipleChoice

---

A customer has five main data centers with one PVWA in each center under different URLs.

How can you make this setup fault tolerant?

**Options:**

---

- A- This setup is already fault tolerant.
- B- Install more PVWAs in each data center.
- C- Continuously monitor PVWA status and send users the link to another PVWA if issues are encountered.
- D- Load balance all PVWAs under same URL.

**Answer:**

---

D

## Question 4

---

**Question Type: MultipleChoice**

---

A customer asked you to help scope the company's PSM deployment.

What should be included in the scoping conversation?

**Options:**

---

- A- Recordings file path
- B- Recordings codec
- C- Recordings retention period
- D- Recordings file type

**Answer:**

---

C

## Question 5

---

**Question Type: MultipleChoice**

---

A customer has three data centers distributed globally and wants highly-available PSM connections in each segmented zone. In addition, the customer needs a highly-available PSM connection for the CyberArk Admins.

What will best satisfy this customer's needs?

**Options:**

---

- A- one PSM per zone with a load balancer and two PSMs for Admins with a load balancer
- B- six PSMs in the mam data center with a load balancer and one PSM for Admins
- C- two PSMs per zone with a load balancer and two PSMs for Admins with a dedicated load balancer
- D- three PSMs per zone with CyberArk built-in load balancing

**Answer:**

---

C

## Question 6

---

**Question Type:** MultipleChoice

---

A customer has two data centers and requires a single PVWA url.

Which deployment provides the fastest time to reach the PVWA and the most redundancy?

**Options:**

---

A- Deploy two PVWAs behind a global traffic manager.

- B-** Deploy one PVWA only.
- C-** Deploy two PVWAs in an active/standby mode.
- D-** Deploy two PVWAs using DNS round robin.

**Answer:**

---

A

## Question 7

---

**Question Type:** MultipleChoice

---

You are installing multiple PVWAs behind a load balancer.

Which statement is correct?

**Options:**

---

- A-** Port 1858 must be opened between the load balancer and the PVWAs.
- B-** The load balancer must be configured in DNS round robin.

**C-** The load balancer must support 'sticky sessions'.

**D-** The LoadBalancerClientAddressHeader parameter in the PVWA.ini file must be set.

**Answer:**

---

C

## Question 8

---

**Question Type:** MultipleChoice

---

How should you configure PSM for SSH to support load balancing?

**Options:**

---

**A-** by using a network load balancer Most Voted

**B-** in PVWA > Options > PSM for SSH Proxy > Servers

**C-** in PVWA > Options > PSM for SSH Proxy > Servers > VIP

**D-** by editing sshd.config on the all the PSM for SSH servers

**Answer:**

---

C

## Question 9

---

**Question Type:** MultipleChoice

---

In which configuration file on the Vault can filters be configured to either include or exclude log messages that are sent through SNMP?

**Options:**

---

**A-** PARAgent.ini

**B-** DBParm.ini

**C-** TSParm.ini

**D-** CyberArk v2 MIB file

**Answer:**

---

A

## Question 10

---

**Question Type:** MultipleChoice

---

A first PSM server has been installed.

What should you confirm before installing any additional PSM servers?

### Options:

---

- A-** The PSM ID of the first installed PSM server was changed and the additional PSM server can use the same PSM ID.
- B-** The user performing the installation is a direct owner in the PSMUnmanagedSessionAccounts Safe, PSM safe and member of PVWAMonitor group.
- C-** The user performing the installation is not a direct owner in the PSMUnmanagedSessionAccounts Safe. Most Voted
- D-** The path of the Recordings Folder must be different on all PSM installations.

### Answer:

---

C

## Question 11

---

**Question Type: MultipleChoice**

---

Which statement about REST API is correct? (Choose two.)

**Options:**

---

- A-** When a user successfully authenticates to the Vault, an authentication token is returned. Most Voted
- B-** REST API Windows authentication method allows skipping the logon API by using the Windows default credentials with a Kerberos ticket.
- C-** To allow High Availability, REST API can be configured to support Session Load Balancing by editing the PVConfiguration.xml and setting the AllowPVWASessionRedandancy=Yes.
- D-** Each REST API call requires that a valid authentication token be provided. Most Voted
- E-** REST calls are directly sent to the currently active Vault using Port 1858.

**Answer:**

---

A, D
