Question 1

Question Type: MultipleChoice

What triggers an appropriate workflow upon receiving a service provisioning or management request?

Options:

- A- Alerts
- B- Orchestrated operations
- C- Recovery time objective
- D- Infrastructure discovery

Answer:

B

Question 2

Question Type: MultipleChoice

Which three parameters define information availability in a modern data center environment?

Options:

A- Reliability -
Accessibility -
Timeliness

B- Capacity -
Availability -
Security

C- Confidentiality -
Integrity -
Availability

D- Reliability -
Integrity -
Performance

Answer:

C

Question 3

Question Type: MultipleChoice

What is an advantage of performing incremental backups compared to cumulative backups for the same data?

Options:

- A- Requires more time to perform data backup
- B- Storage capacity needed for backups is significantly reduced
- C- Requires more storage capacity for backup
- D- Reduces restore time but requires a maximum of two copies

Answer:

B

Question 4

Question Type: MultipleChoice

In continuous data protection, what does the amount of journal space determine?

Options:

- A- Length of time required to recover the data
- B- Amount of space the source and replica volumes require
- C- Amount of data that can be restored to a specific point
- D- How far back the data can be recovered

Answer:

C

Question 5

Question Type: MultipleChoice

What is the maximum number of VLANs that can be supported with one VLAN tag field?

Options:

A- 4096

B- 8192

C- 1024

D- 2048

Answer:

D

Question 6

Question Type: MultipleChoice

What is an accurate statement about the Do-It-Yourself approach for building modern Infrastructure?

Options:

A- Utilizes preconfigured preinstalled and prepackaged vendor ready solutions

B- Combines the datacenter components into a single standalone computing platform managed by software

C- Utilizes products and services from the vendors that provide specific functions with more configuration options

D- Combines datacenter components into a distributed infrastructure platform managed by software

Answer:

C

Question 7

Question Type: MultipleChoice

What occurs when a company's IT infrastructure security is breached by a passive attack?

Options:

A- data is altered by an unauthorized user

B- unauthorized system access is obtained

C- access to services is denied

D- availability of data is affected

Answer:

B

Question 8

Question Type: MultipleChoice

Which process eliminates data redundancy in a data set?

Options:

A- Data archiving

B- Data replication

C- Data migration

D- Data deduplication

Answer:

D

Question 9

Question Type: MultipleChoice

An organization wants to deploy a VM storage migration solution into their data center environment.

What is the result of deploying this type of solution?

Options:

- A- Enables VMs to continue functioning when source data becomes unavailable
- B- Improves the application security of migrated VMs
- C- Enables efficient management of capacity across storage systems
- D- Reduces overall storage capacity requirements

Answer:

C

Question 10

Question Type: MultipleChoice

Which technology allows automation of sensors and devices to share and process information?

Options:

- A- Internet of Things
- B- Cloud computing
- C- Artificial Intelligence
- D- Deep Learning

Answer:

A

Question 11

Question Type: MultipleChoice

What is true about storage system-based replication?

Options:

- A- The source volume is not required to be healthy to restore the data from the snapshot
- B- All the snapshots created from a source volume should be different sizes
- C- Taking multiple snapshots improve the performance of the source volume
- D- Snapshots are immediately accessible after the replication session activation

Answer:

D

Explanation:

Storage system-based replication creates a point-in-time copy of the source data, allowing for the ability to restore the data from the snapshot. All the snapshots created from a source volume should be the same size for the most efficient use of storage space. Taking multiple snapshots does not necessarily improve the performance of the source volume.
