Question 1

Question Type: MultipleChoice

During the test execution of a large customer registration system, the system went down for several times. Although there were no test cases described the tester concluded that the continuity was poor. Which testing method is described here?

Options:

A- dynamic explicit testing

B- dynamic implicit testing

C- static testing

Answer:

B

Question 2

Question Type: MultipleChoice

See the following specification:

How many test situations can be distinguished for this specification when the coverage type decision points modified condition/decision is used?

Options:

A- 2

B- 6

-

C- 8

D- 64

Answer:

C

Question 3

Question Type: **MultipleChoice**

Which test design technique can be used to test performance?

Options:

A- Data Cycle Test

B- Process Cycle Test

C- Real-Life Test

Answer:

C

Question 4

Question Type: **MultipleChoice**

The possible results of every condition are tested at least once. To which coverage type does this refer?

Options:

A- condition coverage

B- condition/decision coverage

C- decision coverage

D- modified condition/decision coverage

Answer:

A

Question 5

Question Type: MultipleChoice

See the following specification:

How many test situations are produced when the coverage type decision points condition/decision coverage is used?

Options:

A- 2

B- 3

C- 4

D- 8

Answer:

C

Question 6

Question Type: MultipleChoice

Problems can be prevented by looking closely at the way the starting point for the test execution must be structured and which process must be deployed when using it. Which problem does this not prevent?

Options:

A- production disruptions

B- a deteriorating starting point

C- testing gets increasingly expensive

Answer:

A

Question 7

Question Type: MultipleChoice

Drivers can be used in the Execution phase of a test process. What are drivers for?

Options:

A- to test, at an early stage, a module that has relationships with modules not yet realized

B- to gain insight into aspects like memory use, CPU use, network load and performance

C- to determine whether the system continues to function correctly and at the required speeds under the expected production load

Answer:

A

Question 8

Question Type: MultipleChoice

What is not an element of a test case in relation to the system behavior to be tested?

Options:

A- action

B- defect

C- initial situation

D- predicted result

Answer:

B

Question 9

Question Type: MultipleChoice

What is an advantage of the BDTM approach?

Options:

A- a test process that can be controlled by the client

B- a cheaper test process

C- a risk-free production launch of the tested system

Answer:

A

Question 10

Question Type: MultipleChoice

What is to be preserved in the activity reserving the testware? What is to be preserved in the activity ?reserving the testware?

Options:

A- all testware created during the project

B- a selection of the testware in consultation with the future administrator

Answer:

B
