**Answer:**

---

C

## Question 12

---

**Question Type:** MultipleChoice

---

In an adequately powered, randomized controlled trial conducted over 3 years, a specific serious side effect (i.e. reduction in leukocytes) with conventional therapy is seen in 0.5% of the study sample. In patients who receive a newly discovered drug, only 0.45% experience the same side effect. Based on these results, the minimum number of patients that would have to receive the new drug for 3 years to statistically demonstrate the prevention of one episode of this side effect in at least one patient is:

**Options:**

---

- A- 15.
- B- 20.
- C- 150.
- D- 200.
- E- 2000.

**Answer:**

---

E
