Question 1

Question Type: MultipleChoice

There are two different configurable products which both share one variation. The shared variation is represented by the same simple product.

A customer added both configurables to the cart with the same selected variation?

How will they be displayed?

Options:

- A- As two separate line items with quantity 1 each
- B- As one line item which lists both configurable products with quantity 1 each
- C- As one line item of the first product with quantity 2
- D- As one line item of the second product with quantity 2

Answer:

B

Question 2

Question Type: MultipleChoice

You are working on a Magento store which will be selling in two countries. Each country has its own set of payment methods.

How do you organize the project to support this requirement?

Options:

- A- Create one website, two payment scopes
- B- Create one website, one store view
- C- Create one website, two store views
- D- Create two websites, two store views

Answer:

A

Question 3

Question Type: MultipleChoice

What are two functions of a resource model? (Choose two.)

Options:

- A- It executes create, retrieve, update and delete actions for an entity
- B- It loads lists of entity models
- C- It is made available in the Magento API for the purpose of data manipulation
- D- It maps an entity to one or more database rows

Answer:

B, D

Question 4

Question Type: MultipleChoice

You are tasked with ensuring customers who log into the site are authorized. By default, this consists of ensuring the customers email and password match the values in the database. On this project, you need to verify additional data in this process.

Keeping in mind upgradeability, how is this done?

Options:

- A- Create a before plugin for \Magento\Customer\Api\AccountManagementInterface's authenticate method
- B- Create a mutation of a CustomerInterface object to intercept the username and password
- C- Create an event observer for the user_save_after observer
- D- Override \Magento\Customer\Controller\AccountController.php

Answer:

C

Question 5

Question Type: MultipleChoice

A merchant gives you the module MyCompany_MyModule to install.

How do you identify which REST endpoints are supported by the module?

Options:

- A- REST endpoints are declared in etc/webapi_rest/di.xml
- B- Every public method of every interface in the Api folder automatically is exposed as a REST endpoint
- C- REST endpoints are declared in etc/rest.xml
- D- REST endpoints are declared in etc/webapi.xml

Answer:

D

Question 6

Question Type: MultipleChoice

A custom module needs to log all calls of \Magento\Customer\Api\AddressRepositoryInterface::save().

Which mechanism do you use?

Options:

- A- An observer on the customer_address_repository_save event, which is automatically fired for every repository save

- B-** A proxy configured to intercept all calls to any public method and log them
- C-** An extension attribute configured in the extension_attributes.xml
- D-** A plugin declared for the save() method

Answer:

A

Question 7

Question Type: MultipleChoice

What is the difference between online and offline shipping methods?

Options:

- A-** Online means that a shipment will have a tracking number, and offline means no tracking numbers are available
- B-** Online means Magento will use a shipping carrier's API to obtain rates, offline means Magento will calculate the rates internally
- C-** Online means that an item's shipping will be processed by the merchant, offline means that it will be processed by the customer
- D-** Online means that it will be sent to the customer using a shipping carrier, offline means the customer will pick up the order in person

Answer:

C

Question 8

Question Type: MultipleChoice

You are writing a customization for the customer module. You need to make sure the configuration files from your module are loaded after the customer module's configuration.

Where should the dependency be declared?

Options:

A- composer.json

B- etc/module.xml

C- etc/config.xml

D- etc/di.xml

Answer:

A

Question 9

Question Type: MultipleChoice

What happens when a category's is_anchor attribute is set to 1?

Options:

- A- Products without a specified category will be associated with this category
- B- The customer will see all products from all children of the category
- C- This is the default category for a website
- D- The category will always be visible in the menu

Answer:

C

Question 10

Question Type: MultipleChoice

You are debugging a problem resulting from a recently deployed around plugin. The plugin is intercepting the doSomething method. The aroundDoSomething plugin method is called successfully, but the original doSomething method is no longer being executed as expected.

What is causing this?

Options:

- A-** The sort order of the plugin is too high and supersedes the priority of the intercepted method
- B-** The plugin implementation returned something other than its callable argument
- C-** The plugin implementation is skipping the execution of its callable argument
- D-** The plugin implementation overlooked using the AbstractPlugin parent class

Answer:

C

Question 11

Question Type: MultipleChoice

A merchant sells shoes with multiple variations such as a color and size. A shoe is represented by a configurable product. There are seven different colors and four sizes.

What is the minimal amount of simple products that represent a combination of color and size needs to be created in order to make a shoe salable?

Options:

- A-** Each color and size must have at least one representation, so a minimum of seven products is needed
- B-** One simple product that represents a combination of color and size is enough
- C-** A product may be purchased even without any combination available. The color and size may be adjusted during order fulfillment
- D-** A simple product for every combination must be created

Answer:

B
