D- cancer occurrence.

**Answer:**

---

B

## Question 6

---

**Question Type: MultipleChoice**

---

Investigator A claims his results are statistically significant at the 10% level. Investigator B argue that significance should be announced only if the results are statistically significant at the 5%.. level. From this we can conclude

**Options:**

---

A- if investigator A has significant results at the 10% level, they will never be significant at the 5% level.

B- it will be more difficult for investigator A to reject the statistical null hypotheses if he always works at the 10% level compared with investigator B who works at the 5% level.

C- if investigator A has significant results at the 10% level, they will also be significant at the level.

D- it will be less difficult for investigator A to reject the statistical null hypotheses if he always works at the 10% level compared with

investigator B, who works at the 5% level.

**Answer:**

---

B

## Question 7

---

**Question Type: MultipleChoice**

---

Carson surveyed members of AHIMA's student CoP regarding the relationship between clinical experiences and job opportunities. All respondents were seniors in HIA programs and each one expected to graduate and take the national exam within the next 6 months. Fifteen of the eighteen respondents indicated at least one clinical rotation had resulted in a job offer. Based on this information, Carson expects to be offered a job during senior clinical rotations. Carson is basing this expectation on

**Options:**

---
