Question 1

What is Veeam vPower NFS Service used for?

Options:

A- It is used to send data to the original location or to a new location specified by the user when restoring It.

B- It allows Veeam Backup & Replication to present VM files in a native format to an ESXi host, from a compressed and deduplicated backup file.

C- It is used to mount a compressed and deduplicated backup file directly to the backup server and perform file and item level restore.

D- It continuously checks the configuration settings of jobs and starts them in accordance with their schedules.

Answer:

B

Question 2

What is the main advantage of using the Backup from Storage Snapshots feature?

Options:

A- It does not create VMware snapshot(s).

B- It saves space in the repository.

C- It speeds up the backup process.

D- It decreases the amount of time the VM is running on a VMware snapshot.

Answer:

C

Question 3

Question Type: **MultipleChoice**

Which HPE SAN storage systems are supported by the Backup from Storage Snapshots feature in Veeam Backup & Replication?
Choose three options.

Options:

A- HPE StoreVirtual and StoreVirtual VSA

B- HPE Nimble Storage AF-series and CS-series

C- HPE StoreEasy Storage

D- HPE 3PAR StoreServ

E- HPE StoreOnce

Answer:

A, B, D

Question 4

Question Type: MultipleChoice

Which of the following can help reduce the amount of traffic that is sent over the network during the second run of a replication job?

Options:

A- Replica seeding

B- Re-IP rules

C- Replica mapping

D- WAN acceleration for replicas

Answer:

A

Question 5

Which of the following need to be performed in order to switch from the orignal VM to a VM Replica and then to use this replica as the original VM?

Options:

A- Change the replication Job to reverse the replication

B- Failback + commit failback

C- Undo failover

D- Permanent failover

Answer:

D

Question 6

Question Type: MultipleChoice

An Availability engineer has configured Veeam Backup & Replication to replicate a mission critical VM to a DR site on an hourly basis and with 24 restore points. The production site has suffered a storage failure and needs to bring up the mission critical machine as soon as possible. Which step should the Availability engineer do next?

Options:

A- Create a failover plan

B- Failover to the replica VM

C- Failback of the replica VM

D- Planned failover to me replica VM

Answer:

B

Question 7

Question Type: MultipleChoice

Which procedure is used to finalize replica failback?

Options:

A- Migrate to production

B- VMware Storage vMotion

C- Replica failback does not need to be finalized

D- Commit failback

E- Quick Migration

Question 8

Question Type: MultipleChoice

When protecting VMs, whore is the Veeam CBT driver (file system filter driver) installed?

Options:

A- On every managed Hyper-V 2012 R2 or older host

B- On every managed Veearn backup proxy

C- On every managed server

D- On every managed VMware vSphere ESXi 5.1 or older host

E- On every managed Hyper-V 2016 or newer host

Answer:

A

Question 9

Which transport mode uses the VMware vSphere Hot-Add feature to attach the virtual disks of a source VM to the backup proxy VM?

Options:

A- Network

B- vPower

C- Virtual Appliance

D- Direct SAN access

E- Direct NFS access

Answer:

C
