Question 1

Question Type: MultipleChoice

An administrator has a vCenter server containing 3 VMware hosts running a total of 25 virtual machines. Each host has 2 Quad-Core CPU sockets.

How many V-Ray licenses does the environment require?

Options:

A- 1 V-Ray license is necessary; one for each vCenter server
B- 3 V-Ray licenses are necessary; one for each host
C- 6 V-Ray licenses are necessary; one for each CPU socket
D- 8 V-Ray licenses are necessary per host; one for each logical processor

Answer:

C

Question 2

Question Type: MultipleChoice

What is the purpose of enabling the Allow Backup Exec to Delete All Expired Backup Sets setting?

Options:

A- It ensures a response to an alert will be required before any backup set is deleted.
B- It ensures Data Lifecycle Management (DLM) is enabled instead of ADAMM.
C- It prevents Backup Exec from keeping the most recent backup set per resource.
D- It causes Backup Exec to immediately delete all expired backup sets and disable the setting.

Answer:

C

Question 3

Question Type: MultipleChoice

An administrator is performing a complete online recovery of a system using a full backup followed by a series of five incremental backups.

How many backup sets will need to be accessed by the Backup Exec server to complete the restore from the last incremental backup?

Options:

A- 1
B- 4
C- 5
D- 6

Answer:

D

Question 4

Question Type: MultipleChoice

Which two conditions cause Data Discovery to fail to detect remote servers in the same domain as the Backup Exec server? (Choose two.)

Options:

A- The administrator failed to add the default logon account to the local administrators group on the remote servers.
B- The servers have Windows Management Instrumentation (WMI) disabled.
C- The firewall on the remote servers is configured to block WMI traffic.
D- The firewall on the remote servers is configured to block port 10000.
E- The remote servers have an old version of the Backup Exec Agent for Windows installed.

Answer:

B, C

Question 5

Question Type: MultipleChoice

Which two vSphere permission levels are required for successful backup of a VMware virtual machine without Granular Recovery Technology (GRT)? (Choose two.)

Options:

A- Virtual machine > Provisioning > Allow read-only disk access
B- Virtual machine > Interaction > Power Off
C- Virtual machine > Inventory > Register
D- Virtual machine > State > Create snapshot
E- Virtual machine > Interaction > Power On

Answer:

A, D

Question 6

Question Type: MultipleChoice

Which type of server should an administrator Select in Add a Server wizard under the Backup and Restore tab to add a SQL server?

Options:

A- Microsoft Windows computers and servers
B- File server or NDMP data server
C- Microsoft SharePoint server farm
D- Microsoft SQL server

Answer:

D

Question 7

Question Type: MultipleChoice

An administrator is using the restore wizard to browse files and folders and sees that the system, volume, and backup set information is available, but it is impossible to browse the

individual file and folder content.

Why might the individual file and folder content be unavailable?

Options:

A- The tape is missing from the library.
B- There are no files that have been backed up from the system.
C- An incorrect date range is defined in the Show backups from setting.
D- The server is configured to truncate catalogs.

Answer:

D

Question 8

Question Type: MultipleChoice

Which option can an administrator use to reduce the size of catalogs when the catalog folder is too large?

Options:

A- Delete after X days
B- Truncate after X days
C- Age database
D- BE Database maintenance

Answer:

B

Question 9

Question Type: MultipleChoice

The security team that monitors and audits a network has captured unexpected but regular network traffic being sent from the Backup Exec server to systems that are deliberately restricted from being involved with Backup Exec. The team has notified the backup administrator of the findings.

Which Backup Exec setting should the administrator change to stop the unexpected network traffic to restricted systems?

Options:

A- Allow Backup Exec to report anonymous usage information
B- Discover servers that have data that has not been backed up
C- Enable TCP dynamic port range
D- Check for updates automatically according to a schedule

Answer:

A

P2P exams

Question 10

Question Type: MultipleChoice

Which activity information is an administrator unable to configure for display in the Audit Logs?

Options:

A- Alerts
B- Error-Handling Rules
C- Reports
D- Logon Accounts

Answer:

C

P2P exams

Question 11

Question Type: MultipleChoice

What is required in order to perform a Simplified Disaster Recovery (SDR) of a system from a deduplicated backup set?

Options:

A- The deduplicated data must be staged to the local server before recovery.
B- The deduplication storage folder must be locally attached to the target server.
C- The deduplication storage folder must be taken offline to prevent backups from running during the restore operation.
D- The target server must connect to a Backup Exec Server with the deduplication storage.

Answer:

D

Question 12

Question Type: MultipleChoice

Which action can an administrator perform during the Backup Exec database maintenance?

Options:

A- apply patches to the database
B- take the database offline
C- delete expired data from the database
D- put the database into single user mode

Answer:

C
