Question 1

Question Type: MultipleChoice

Which two characteristics describe vSphere HA?

Options:

- A-** vSphere HA restarts VMs if their host becomes isolated in the management network.
- B-** In response to datastore accessibility failures, vSphere HA restarts VMs on unaffected hosts.
- C-** vSphere HA performs load balancing across the hosts in a cluster to prevent resources contention
- D-** By Keeping a secondary VM running at all times, vSphere HA protects VMs from data loss.
- E-** When vCenter Server experiences downtime, vSphere HA restarts VMs on unaffected hosts.

Answer:

A, B

Question 2

Question Type: MultipleChoice

Which feature must an administrator use to revert back to the previous of a VM template?

Options:

- A- VM Snapshots
- B- Content Library
- C- VMware Tools
- D- Storage vMotion

Answer:

B

Question 3

Question Type: MultipleChoice

Which sequence of steps must a vSphere operator take to create an NFS datastore for a host, a cluster, or a data center?

Options:

- A- Right-click on an ESXi host, select Storage > New Datastore
- B- From the actions drop-down menu, select NFS > New datastore
- C- From the datastore tab, select NFS > New datastore
- D- Select an ESXi host, click the Configure tab > Storage Devices

Answer:

A

Question 4

Question Type: MultipleChoice

A VMware administrator monitoring a project has been advised to run the compute health check using the vSphere 7 client to monitor the ESXi hosts health.

How should the administrator approach this task?

Options:

A- Menu > Administrator > Deployment > System Configuration

B- Host > Monitor > Skyline Health > Expand Online Health Connectivity > Compute Health Checks > Reset

C- Host > Monitor > Events

D- Host > Monitor > Issues and Alarms

Answer:

B

Question 5

Question Type: MultipleChoice

A virtual infrastructure operator needs to migrate a virtual machine (VM).

Which action can the operator take to overcome the error message?

Options:

- A-** Select a different datastore for the VM.
- B-** Select a cluster that has access to additional storage space.
- C-** Change the virtual disk format to Thick provision Eager Zeroed.

D- Select a different ESXi host for the VM

Answer:

A

Question 6

Question Type: MultipleChoice

An alarm is triggered in vSphere Client due to failure of a host in a cluster. The host has not returned to normal state, but the administrator wants to clear the alarm.

Which sequence of steps should the administrator take to accomplish this goal?

Options:

A- Host > Configure > Alarm Definitions > select an alarm > Delete alarm

B- Host > Monitor > Issues and Alarms > Triggered Alarms > select alarm > select Acknowledge

C- Host > Monitor > Issues and Alarms > Triggered Alarms > select alarm > select Reset to Green

D- Host > Monitor > Skyline Health

Answer:

C

Question 7

Question Type: MultipleChoice

An administrator need to migrate a powered off virtual machine to another cluster with no shared storage.

Which option should the administrator select for a successful migration?

Options:

- A- Change storage only
- B- Migrate virtual machines(s) to a specific datacenter
- C- Change computer resource only
- D- Change both compute resource and storage

Answer:

D
