## Question 1

---

**Question Type:** MultipleChoice

---

How can users write their own connector for the ESB Profile of the WS02 EI?

### Options:

---

- A- Create a connector project and include proxy services to invoke the API provider's endpoints.
- B- Create a connector project and write Synapse configurations that call the API provider's endpoints.
- C- Create a connector project and use the API provider's SDK.
- D- Both option a and b can be used.

### Answer:

---

C

## Question 2

---

**Question Type:** MultipleChoice

---

Select the CORRECT statement about setting parameters for class mediators.

**Options:**

---

**A-** Both statement b and c are correct.

**C-** It is not possible to set parameters for custom mediators.

**C-** Custom mediator's parameters should be declared as public fields in mediator code. For instance: public String foo, bar;

**D-** Synapse properties can be used to pass values to mediator arguments. For instance:

```
<class name='org.wso2.custom.HelloClassMediator'>
```

```
</class>
```

**Answer:**

---

D

## Question 3

---

**Question Type:** MultipleChoice

---

What is the best option to run custom Java code in a periodical manner within WS02 ESB?

**Options:**

---

- A-** Write a custom task with the Java logic and configure it to run periodically.
- B-** Option b and c are correct.
- C-** Write a Class mediator with the Java logic, create a proxy service that uses that mediator, and send messages using an external client periodically.
- D-** Write a Class mediator with the Java logic, create a proxy service that uses that mediator, and send messages using an external client periodically.

**Answer:**

---

B

## Question 4

---

**Question Type:** MultipleChoice

---

Which statement is INCORRECT with respect to implementing a custom mediator and best practices to achieve thread safety?

**Options:**

---

- A-** Use of class variables is not recommended.
- B-** You can define and use a global variable in the mediator class if and only if those variables are shared with all the messages in that particular message flow.
- C-** When we use the mediator in different artifacts, an instance of the mediator gets created for each occurrence in the configuration.
- D-** A mediator instance gets created for each occurrence in the configuration and for each message.

**Answer:**

---

C

## Question 5

---

**Question Type: MultipleChoice**

---

What is the most appropriate scenario for using a class mediator over a Script mediator?

**Options:**

---

- A-** For debugging purposes, you want to introduce some latency in the message flow.

- B-** You want to change just a single element in the XML payload without changing other elements.
- C-** For testing purposes, you want to record the elapsed time between calling a backend service and receiving the response by the proxy service.
- D-** You want to develop a logging mediator that sends logging data to an external database such as MySQL.

**Answer:**

---

C

## Question 6

---

**Question Type:** MultipleChoice

---

Select the CORRECT statement about deploying custom mediator artifacts.

**Options:**

---

- A-** If it is a class mediator, you can put that JAR file in the <EI\_HOME>/lib directory.
- B-** If you have developed your custom mediator as a regular non-OSGI JAR, you have to put it in the <EI\_HOME>/extensions directory.
- C-** All of the above.

**D-** If you have developed your custom mediator as an OSGI bundle, you have to put it in the <EI\_HOME>/dropins directory.

**Answer:**

---

D

## Question 7

---

**Question Type: MultipleChoice**

---

Which statement is FALSE about the ESB profile?

**Options:**

---

- A-** By setting the transport.jms.MessageType parameter with the respective content type, you can read different message formats from a queue.
- B-** When the JMS transport is enabled on a proxy service, ESB profile will start listening on a JMS queue with the same name as the proxy service.
- C-** By default, ESB profile considers all messages consumed from a queue as a SOAP message.
- D-** ESB profile can work with any JMS broker that offers JNDI support.

**Answer:**

---

A

## Question 8

---

**Question Type:** MultipleChoice

---

Which statement is FALSE about WS02 transport-level security?

**Options:**

---

- A-** WS02 EI can support TLS 1, TLS 1.1, and TLS 1.2 with JDK 1.7
- B-** You must enable HTTPS transport configuration in aixs2.xml in order to use transport-level security.
- C-** The HTTPS transport supports SSL tunneling.
- D-** Transport-level security secures the messages in the wire.

**Answer:**

---

D

## Question 9

---

### Question Type: MultipleChoice

---

Identify the INCORRECT statement regarding the `cache` in the `configuration` section of the `/conf/registry.xml` file.

`instaceid`

`sha red registry`

`true`

`true`

`/`

### Options:

---

- A-** This `cacheid` is used to identify the cache it should look for when caching is enabled.
- B-** `<cacheid>` is the same as the JDBC connection URL of the registry database.
- C-** You can use any arbitrary name for the `<cacheid>` configuration element.

D- Both statement b and c are incorrect.

**Answer:**

---

C

## Question 10

---

**Question Type: MultipleChoice**

---

What should you enter for the cacheld configuration element that resides inside the remotelInstance configuration section of the /conf/registry.xml file?

instaceid

true

true

/

**Options:**

---

- A- The SHA 256 hash of the JDBC connection URL of the registry database.
- B- The value you entered for the element.
- C- The SHA 255 hash of the value you gave to the element.
- D- The JDBC connection URL of the registry database.

**Answer:**

---

D
