Question 1

Question Type: MultipleChoice

You want to parse a URL into its single parts. Which function do you choose?

Options:

A- parse_url()
B- url_parse()
C- get_url_parts()
D- geturlparts()

Answer:

A

Question 2

Question Type: MultipleChoice

When would you use classes and when would you use namespaces?

Options:

A- Use classes to encapsulate code and represent objects, and namespaces to avoid symbol name collisions
B- Use classes for performance-sensitive code, and namespaces when readability matters more
C- Use namespaces for performance-sensitive code, and classes when readability matters more
D- Always use them; namespaces are always superior to classes

Answer:

A

Question 3

Question Type: FillInTheBlank

What is the output of the following code?

```
class Number {
private $v = 0;
public function __construct($v) { $this->v = $v; }
public function mul() {
return function ($x) { return $this->v * $x; };
}
}
$one = new Number(1);
$two = new Number(2);
$double = $two->mul()->bindTo($one);
echo $double(5);
```

Answer:

5

Question 4

Question Type: MultipleChoice

Consider the following table data and PHP code, and assume that the database supports transactions. What is the outcome?

Table data (table name "users" with primary key "id"):

id name email

------- ----------- -------------------

1 anna alpha@example.com

2 betty beta@example.org

3 clara gamma@example.net

5 sue sigma@example.info

PHP code (assume the PDO connection is correctly established):

```
$dsn = 'mysql:host=localhost;dbname=exam';

$user = 'username';

$pass = '********';

$pdo = new PDO($dsn, $user, $pass);

try {

$pdo->exec("INSERT INTO users (id, name, email) VALUES (6, 'bill', 'delta@example.com')");

$pdo->begin();

$pdo->exec("INSERT INTO users (id, name, email) VALUES (7, 'john',
'epsilon@example.com')");

throw new Exception();

} catch (Exception $e) {

$pdo->rollBack();

}
```

Options:

A- The user 'bill' will be inserted, but the user 'john' will not be.
B- Both user 'bill' and user 'john' will be inserted.
C- Neither user 'bill' nor user 'john' will be inserted.
D- The user 'bill' will not be inserted, but the user 'john' will be.

Answer:

A

Question 5

Question Type: FillInTheBlank

Which PHP function sets a cookie and URL encodes its value when sending it to the browser?

Answer:

setcookie, setcookie()

Question 6

Question Type: MultipleChoice

Which of the following PHP functions can be used to set the HTTP response code? (Choose 2)

Options:

A- header_add()
B- header()
C- http_set_status()
